## **CERTIFICATION**

Prior to starting construction, the operator must certify in the site log book that this SWPPP was prepared in accordance with the requirements in the permit and that it meets all federal, state and local stormwater management, pollution prevention, and erosion and sediment control requirements.

In addition, any person signing any document pertaining to the project, (i.e., Notice of Intent (NOI), Notice to Terminate (NOT), reports, certifications, etc.) must sign the Certification Statement in this report. The owner, all contractors and subcontractors or authorized representatives of the owner, contractors and subcontractors will be required to sign and date the Certification Statement after reading and understanding this Stormwater Pollution Prevention Plan as stated in Part VII, H of the General Permit.

The SWPPP Preparer Certification and Owner/Operator Certification are provided on the following pages. The Contractor / Subcontractor SPDES Permit Certification is provided as Appendix B. It must be signed by all contractors and subcontractors, listing their responsibilities, before any construction activity may begin on site. In addition, the contractor or subcontractor responsible for soil disturbance shall identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be a trained contractor and shall be on site when soil disturbance activities are being performed.

All signed forms must be kept with this SWPPP.

## Plan Certification

This SWPPP has been prepared in accordance with good engineering practices to meet requirements set forth by the United States Environmental Protection Agency (EPA) and New York State Department of Environmental Conservation (NYSDEC). As required under the terms of NYSDEC's General Permit GP-0-20-001, this plan is hereby certified as follows:

"I hereby certify that the Stormwater Pollution Prevention Plan (SWPPP) for this project has been prepared in accordance with the terms and conditions of the GP-0-20-001. Furthermore, I understand that certifying false, incorrect or inaccurate information is a violation of this permit and the laws of the State of New York and could subject me to criminal, civil and/or administrative proceedings."

**NAME:** Peter Loyola, RLA

**SIGNATURE:** \_\_\_\_\_ **Date:** \_\_\_\_\_

### Owner/Contractor Certification

As required under the terms of the NYSDEC's General Permit GP-0-20-001, this certification statement must be signed by the owner or operator. The owner/operator will be responsible to ensure that this SWPPP is being followed in its entirety.

"I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted."

## I. INTRODUCTION

This Stormwater Pollution Prevention Plan (SWPPP) has been prepared for the Shangri-La Greenhouses and Farmstand Project located in Moreau, New York. This SWPPP has been prepared in accordance with the New York State Department of Environmental Conservation (NYSDEC) State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activities (Permit No. GP-0-20-001). See Appendix I for the General Permit.

Two NOI's have previously been submitted for this site.

The first NOI was submitted June 28, 2022, for the Route 9 Highway Construction Staging Area project. The permit identification number associated with this project is NYR11J890. The Project involved the temporary use of a portion of the property for a staging area during construction of the I-87/Exit 17 Interchange improvements. The areas associated with the Highway Construction Staging Area have been fully stabilized and vegetated.

The second NOI was submitted Sept. 13, 2024, for the Spiers Falls Commercial Crop Field Area. The permit submission number associated with this project is HQ6-K524-4N4Z8. The Spier Falls Commercial Crop Field Area Project involved the temporary use of a portion of the property for commercial crop fields and a dirt access road and staging area, constructed in June 2024 for the 2024 growing season. This area is not associated with the staging area used for the interchange improvements.

The previous permits did not propose the creation of new impervious areas. The previous SWPPP reports only included the required Erosion and Sediment Control components. This SWPPP will replace the previous Erosion and Sediment Control SWPPPs associated with this site. This SWPPP will include Post Construction Stormwater Practices as new impervious cover is now being proposed.

This SWPPP outlines methods that owners and those under contract to the owner are to use to retain surface stormwater and to prevent sediment-laden runoff from entering waterways, bodies of water, wetlands and other sensitive environments. This plan outlines the methods for stormwater and runoff management during the construction phase, specifies post-construction stormwater management practices, and identifies the responsibilities of the Pollution Prevention Team throughout the entire project duration.

The primary objectives with regard to the stormwater management and pollution prevention are as follows:

1. Utilize and maintain natural drainage areas and existing hydrology throughout the project area.
2. Maintain existing soil properties and maximize the potential for stormwater infiltration and groundwater recharge.
3. Maintain or reduce the pre-development peak runoff discharge rates for the appropriate storm events at discharge points through proposed stormwater mitigation.
4. Provide the required WQv and RRv treatment volumes through the use of standard and green infrastructure practices.
5. Stabilize disturbed areas and provide erosion control measures to minimize soil erosion during and after construction.
6. Inspect and maintain the temporary and permanent stormwater control devices in accordance with local, state, and federal requirements.

### **Pollution Prevention Team**

The Pollution Prevention Team consists of a qualified professional representative of the owner, and an authorized agent of the General Contractor. The General Contractor will be responsible for ensuring that all his employees and all the subcontractors understand the provisions set forth in this Stormwater Pollution Prevention Plan and SPDES General Permit for Construction Activities. The owner shall oversee the construction activities of the General Contractor and ensure the Pollution Prevention Plan is being followed in its entirety. The Owner, General Contractor, and authorized agents for each subcontractor must sign the Contractor Certification Statement of this plan prior to commencing construction activities. See Appendix B of this report.

The Pollution Prevention Team will be responsible for ensuring that the construction of this project is in accordance with the SPDES General Permit by implementing the mitigation measures defined in the Stormwater Pollution Prevention Plan and as specified in the contract documents. The Pollution Prevention Team will also be responsible for keeping the Stormwater Pollution Prevention Plan current and notifying the appropriate agencies should changes to the plan become necessary.

### **III. PROJECT DESCRIPTION**

The proposed project consists of the development of 12 greenhouses, barn, septic system, staging area, access roads, parking, and associated stormwater structures with ingress and egress from Spier Falls Road. A commercial farmstand is also proposed with ingress and egress from Old Saratoga Road.

The project will result in soil disturbance and the creation of impervious surfaces (building roofs and asphalt tailing access drives). In accordance with the NYSDEC Stormwater Design Manual, 100% of the Water Quality Volume for the proposed impervious surfaces shall be provided for this project. No permanent treatment measures are required for areas that remain undisturbed or where new vegetation is specified.

Runoff Reduction Volume (RRv) Techniques are being proposed to treat the minimum required RRv volume and will consist of vegetated swales and an infiltration basin.

WQV and RRv will be provided for Subcatchments 2a, 2c, 2e, 4a, 5a, 5b and 6 as these areas encompass all proposed impervious surfaces.

WQv and RRv are not being proposed for Subcatchments 1, 2b, 2d, 3, 4b, and 7 as there are no new impervious areas proposed within this subcatchment area.

The project is planned to be completed in five (5) phases. See Phasing Plan and Site Plan Drawings in Appendix C.

### **IV. SITE DESCRIPTION**

A description of the project site and the physical conditions that comprise the overall site are as follows:

#### **A. Location and Size**

The Project is located in Saratoga County, Town of Moreau, north of Old Saratoga Road and west of the Route 9 & I-87 interchange. The property consists of a total area of 76.37 acres with a proposed disturbed area of 13.9 acres.

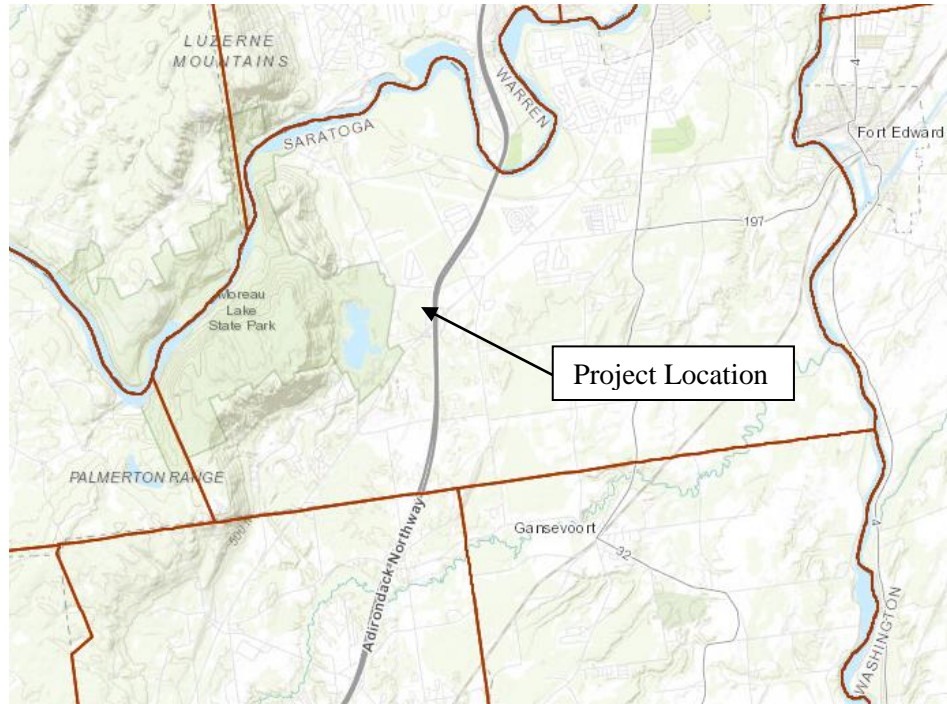

Figure 1 – Site Location Map

## **B. Existing Conditions, Topography, Land Cover**

The property, identified as tax parcels 76.-3-83.111 and 76.-3-89.2, has been largely undeveloped. The site has been logged several times throughout the years, most recently in 2023. In 2020, logging of the site was approved by the Town of Moreau and oversight/inspections of logging activities were conducted by the Town and the New York State Department of Environmental Conservation (NYSDEC). In 2023, additional land was cleared for the purposes of temporary agriculture.

Current land cover in the vicinity of the proposed greenhouses consists of recently logged and/or grubbed areas, primarily consisting of exposed soil surfaces and agriculture area. Existing site access is located off Spier Falls Road. An existing access road (former logging road) is also located on the site and will continue to be used for site circulation. Gravel has been used for a small stretch at the site's entry to create temporary, stabilized construction access for erosion and sediment control.

Current land cover in the vicinity of the proposed farmstand consists of recently logged and/or grubbed areas, primarily consisting of exposed soil surfaces and crop fields. Existing site access is located off Spier Falls Road. An existing access road

(former logging road) is also located on the site and will continue to be used for site circulation. Gravel has been used for a small stretch at the site's entry to create temporary, stabilized construction access for erosion and sediment control.

Sediment basins are located throughout the site and were originally installed to control sedimentation during logging and when the site was being used as a staging area for the I-87/Exit 17 improvements.

The site contains a number of jurisdictional and non-jurisdictional Federal and State wetlands. The proposed crop fields will not encroach on previously delineated wetland boundaries or associated wetland buffers. See Erosion & Sediment Control Plan in Appendix C for reference.

Existing slopes generally range between approximately <1% and 9%.

### C. Soils

According to the Natural Resources Conservation Service (NRCS) Web Soil Survey, the soils within the greenhouse and farmstand areas are primarily well drained to poorly drained.

The soil types and associated Hydrological Soil Group (HSG) classification within the project limits are presented in Table 1 below:

| Soil ID | Soil Description                              | HSG |
|---------|---|-----|
| DeA     | Deerfield loamy fine sand, 0 to 3% slopes     | A   |
| DeB     | Deerfield loamy fine sand, 3 to 8% slopes     | A   |
| EiB     | Elmbridge vey fine sandy loam, 3 to 8% slopes | C/D |
| WnB     | Windsor loamy sand, 3 to 8% slopes            | A   |
| Wa      | Wareham loamy sand                            | A/D |

A copy of the soil survey for the parcel is provided in Appendix G of this SWPPP and is provided for reference as Figure 2, below.

Soil testing in the form of test pits and infiltration testing has been performed at the project site. Locations of test pits are located on the project maps. Results can be found in Appendix G.

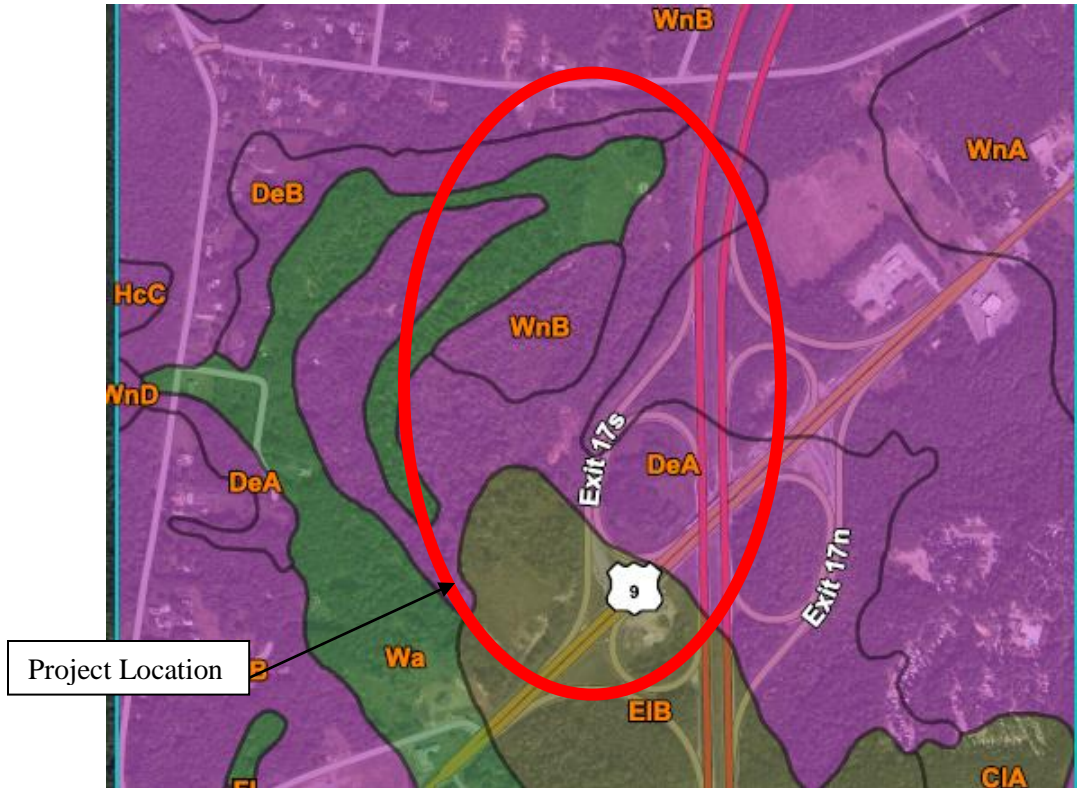

Figure 2 - Soil Map

See WQv and RRv calculations for a description on soil designations used for this project.

#### D. Receiving Waters

The nearest surface water bodies to which construction site runoff will discharge are on-site State and Federal wetlands. Based on New York State USGS Quadrangle Mapping, water will then discharge into the North Branch of the Snook Kill. The Creek is classified as a Class C stream on the NYSDEC Environmental Resource Mapper. This waterbody has not been identified as a 303(d) segment, and there are no direct discharges from the site to this stream.

## **E. Archeological Assessment**

According to the New York State Cultural Resource Information System (CRIS), the proposed staging areas are not located within an archaeologically sensitive area. In addition, the site has been previously disturbed by logging activities.

## **F. Listed, Endangered or Threatened Species or Critical Habitat Assessment**

Based on the NYSDEC Environmental Resource Mapper, a small portion of the site is located within an area with the potential for Rare Plants or Animals. The portion of the project site located within this area has been previously disturbed by logging activities. As a result, there will be no disturbance of rare plant species or animals.

The Environmental Mapper also shows the site within the vicinity of freshwater wetlands. The NYS Department of Environmental Conservation and Army Corps of Engineers issued Freshwater Wetlands/Jurisdictional letters dated 10/23/2015 and 8/13/2015, respectively. NYSDEC and Federal wetlands are shown on the project maps. As outlined in Section IV.B, the project will not encroach on previously delineated wetlands or associated wetland buffers.

## **V. MANAGEMENT OF RUNOFF**

A number of planning strategies were implemented to preserve natural resources and reduce impervious cover at the site. Upon commencing design work on the project the original concept plan was reviewed. Changes were made to reduce the overall impact of the proposed improvements. Below is the list of strategies outlined by the NYSDEC and a brief description of how those strategies were implemented.

### **A. Preservation of Natural Resources**

**Preservation of undisturbed areas** - The entire property is 76.37+/- acres. The current plan proposes development that will disturb approximately 13.9 acres of the property, of which much has been previously disturbed.

**Preservation of buffers** – During design, every attempt was made to reduce impact to existing vegetation. The wetland and 100' wetland buffer is not impacted. Grading was designed to protect vegetated and sensitive areas. The proposed storage buildings were situated to maintain vegetated buffers in the vicinity of the Interstate 87 right-of-way.

**Reduction of clearing and grading** – The site was previously logged, the removal of additional mature vegetation is not necessary, the project preserves trees that serve as a buffer in the vicinity of the adjacent residential properties and the Interstate 87 right-of-way. Grading is limited to the footprint of the greenhouse, farmstand and immediate surroundings, including the swales and detention ponds.

**Locating development in less sensitive areas** - The development does not disturb wetlands, wetland buffers, or critical habitats, and is not within the floodplain.

**Open Space Design** – The project limits impervious surfaces to the greenhouses, farmstand and access roads. The majority of the site will remain vegetated.

**Soil restoration** – All areas disturbed by grading and/or compaction shall be “restored” in order to recover the original properties and porosity of the soils. The method to be used is outlined in Section VI-C.

#### **B. Reduction of Impervious Cover**

Impervious cover was reduced to the greatest extent practical. The gravel drive areas were minimized to the greatest extent possible. The majority of the facility will consist of crop fields, vegetated and grassed areas.

The proposed maintenance access to the stormwater ponds will be vegetated. An impervious surface is not proposed.

#### **C. Runoff Reduction Techniques / Green Infrastructure Management Practices**

Several Runoff Reduction Volume techniques were utilized in the design of this project. The following runoff reduction techniques are utilized in this project:

1. Vegetated swales are used to achieve a WQv reduction for the project.
2. A cistern is used to provide WQv reduction for the project.
3. An infiltration basin is used to provide the remaining RRv volume after the reduction (vegetated swales and cistern) is applied to the required WQv calculations.

See Water Quality and RRv Calculations and summary in Appendix F.

#### **D. Standard Stormwater Management Practices**

The permanent standard treatment features of the Stormwater Management System for the proposed project consists of Micropool Extended Detention Ponds. Grassed drainage swales, cistern, and infiltration basin provide the required minimum RRv treatment. In all instances, the structures associated with the stormwater management system have been sized to accommodate peak flows and volumes from the appropriate storm events as required by the NYSDEC. The design storm is the twenty-five-year, 24-hour storm, with provisions made for the one-, ten-, and one-hundred-year storm events.

##### **1. Stormwater Ponds with Forebay and Micropool**

A Stormwater Pond to temporarily store surface water runoff, provide water quality treatment, and mitigate adverse downstream effects is designed based on the following criteria:

- The pond is designed to detain various storm events as mitigation for increases in impervious area; pre-construction flow rates will be maintained or reduced;
- The pond is sized to accommodate the peak flow from the twenty-five-year, 24-hour storm, with provisions made for the one-, ten-, and one-hundred-year storm events;
- The pond is designed to maintain a permanent water elevation;
- Pond is designed for adequate freeboard;
- The maximum side slope of the ponds will not exceed a slope of 4H:1V;
- The pond will have an aquatic bench. Safety benches are not required; as all side slopes are 4:1 or greater.
- The pond is accessible for maintenance.

## **2. Infiltration Basin**

Infiltration Basins to allow surface water runoff to infiltrate into the surrounding soils are designed based on the following criteria:

- The infiltration basins are designed to allow the entire water quality volume (WQv) to infiltrate into the surrounding soils;
- The infiltration basins are designed utilizing a safety factor of two (2) applied to the infiltration rates measured in the field. Field measured rates were determined to be around 200 in/hr, while the rates utilized in design are 100 in/hr.
- The infiltration basins are sized conservatively (assuming infiltration only through the floor of the practice);
- The infiltration basins are designed to de-water within 48 hrs of a storm event (see Appendix F);
- Infiltration basins have been designed with emergency spillways, designed in the event of system failure to allow for stable, controlled discharge downstream.
- The maximum side slope of the basins will not exceed a slope of 3H:1V, and;
- The basin will be accessible for maintenance.

## **4. Drainage Swales**

Drainage swales to provide RRV treatment and convey surface water runoff shall be designed based on the following criteria:

- All drainage swales are sized to accommodate the peak flow from the twenty-five-year, 24-hour storm, with provisions made for the one-, ten-, and one-hundred-year storm events;
- Drainage swales are designed with adequate freeboard;
- Drainage swales will be grass-lined, unless otherwise noted on plans.
- All permanent swales will be accessible for maintenance; and
- Check dams will be installed in swales, as deemed necessary, to reduce sedimentation.

#### **4. Conveyance Piping**

Storm runoff from developed areas will be conveyed through stormwater piping to the nearest stormwater management system. In general, stormwater piping is designed such that:

- All conveyance piping is sized to accommodate the peak flow from the twenty-five-year, 24-hour storm, with provisions made for the one-, ten-, and one-hundred-year storm events;
- Flow capacity is sufficient to convey runoff to the receiving catch basin, pond, or ditch without overflowing the catch basin, pond, or ditch at the entrance of the culvert; and
- The strength of the piping is sufficient to withstand the soil and vehicle loading when installed according to the design plans.

See Sheets C-201-201 for proposed stormwater layouts and Sheets C-702, 705-707 for details.

#### **6. Thermal Pollution**

Stormwater that comes in contact with buildings, roadways, or other impermeable surfaces may increase in temperature during warm weather. If stormwater is discharged into surface water bodies, the temperature of the water body may also increase, potentially threatening plant and animal species sensitive to temperature changes, as well as providing an environment that may cause nuisance species to flourish.

The stormwater that comes in contact with the proposed surfaces will be retained in the drainage courses and proposed structures for a significant amount of time prior to reaching any sensitive areas. This retention will allow treatment of the stormwater by allowing suspended solids to settle as well as allow water that has come in contact with impermeable surfaces to cool.

## **VI. CONSTRUCTION ACTIVITIES**

### **A. Install Silt Fencing**

Initial disturbance will be limited to that necessary to install silt fencing as shown on Sheet C-200-201, "Grading & Erosion Sediment Control Plan." Once silt fencing is installed, additional clearing may continue as necessary for stormwater improvements and preparation of access roadway improvements. All waste will be removed from the site promptly and sent to an appropriate waste or construction and demolition management facility. Prompt removal of soils and wastes will reduce the risk of sediment entering runoff and thus being discharged into surface waters.

### **B. Temporary Stockpiles**

Construction materials prone to erosion (topsoil, sands, sub-base, etc.) shall be stored in the locations/staging areas delineated on Sheet C-200-201. Silt fence shall be installed around the stockpile area prior to the commencement of construction.

### **C. Grading / Site Disturbance / Soil Restoration**

Site demolition of existing conditions and site preparation/grading of proposed improvements will include stripping, stockpiling, excavation, earth removal, and rough grading of the stormwater management areas, building foundations, access drives, and pathways. Excavation will also include trenching for the installation of utilities and footings. Finished grading is shown on Sheet C-200-201.

Surfaces that will be grass-covered shall be seeded immediately upon final grading to minimize both the quantity of runoff and the potential for erosion. Soils on steep slopes (>1:3, rise:run) or any slope which drains directly off site or to a surface water body must be covered with an approved 100% bio-degradable, non-synthetic erosion control product (straw mulch, jute mesh, etc.) to achieve healthy vegetation as soon as possible.

Stormwater may be diverted around seeded areas through temporary ditches or piping. Temporary ditches may be lined with stone riprap, erosion control fabric, or grass as appropriate to reduce the sedimentation of stormwater runoff.

All areas disturbed by grading and/or compaction shall be “restored” in order to recover the original properties and porosity of the soils. The following method will be used on all disturbed areas to be vegetated:

- Till compost into subsoil to a depth of at least 12” using a cat-mounted ripper, tractor-mounted disc, or tiller, mixing, and circulating air and compost into subsoils.
- Rock-pick until uplifted stone/rock material of four inches and larger in size are cleaned off the site.
- Apply topsoil to a depth of 6 inches.
- Vegetate as required on approved plans.

#### **D. Construction Sequencing / Schedule**

The project will be constructed in five (5) Phases. See Phasing Plans in Appendix C.

Phase I (7.41 acres), will include the construction of the access road off of Spier Falls Road, barn, parking area, two (2) greenhouses, stormwater pond P4, infiltration basin P5, and associated vegetated swales. Phase I will be completed in two separate phases to prevent more than 5 acres of disturbance at one time.

Phase II (0.39 acres) will include the construction of an additional two (2) greenhouses.

Phase III (2.71 acres) will include 4 additional greenhouses, the remainder of the access drive, stormwater pond P6, and associated vegetated swales.

Phase IV (1.64 acres) will include the construction of the remaining four (4) greenhouses.

Phase V (1.81 acres) will include the farmstand. Improvements will include the pavilion, parking stormwater pond 3P and associated vegetated swales.

The sequence of construction tasks selected below is designed to combine development with responsible land management as well as protection of sensitive environments. Temporary and permanent stabilization methods will be implemented before

construction begins and will be continuously modified and maintained throughout the project to provide the best methods for stormwater management and pollution prevention. The following construction tasks, if applicable, will be followed for each phase of construction.

The progression of construction phases is subject to change due to unexpected weather events, contractor and equipment availability, etc. Construction of Phase I is expected to begin upon project approval. Subsequent phases will be constructed based on market demand.

Within these phases, multiple tasks of development will occur simultaneously and stabilization methods, both temporary and permanent, will be utilized upon completion of each task. Temporary stabilization methods shall be phased into permanent stabilization methods to minimize exposed or unstable soils for an extended period of time.

### **Task I - Staging Area and Perimeter Erosion Control**

Task I will include the establishment of stabilized construction staging areas and installation of perimeter erosion control devices. The anticipated staging areas are shown on Sheet C-200-201.

Construction entrances shall be maintained in a condition that will prevent tracking of sediment onto public rights-of-way or streets. Silt fences and all other temporary silt and pollution control devices will be installed as shown on the Grading Plans and around all disturbed areas parallel to the slope to reduce washouts and erosion to any adjacent surface water bodies. Stockpile areas will be defined with perimeter silt fencing prior to stockpiling. Unpaved temporary/permanent driveways shall be covered with gravel to limit dust and improve air quality in the area of the site.

Initial clearing and earth disturbance will be limited to that necessary to install sediment control measures. Additional excavation and clearing will only take place after sediment and erosion controls are in place.

## **Task II – Demolition, Clearing, Grubbing, Rough Excavation, Hauling**

Task II will include site demolition, clearing, grubbing brush areas, stripping/stockpiling topsoil, and removal of excess earth off site in order to “rough grade” the permanent storm structures, access drives, pathways, and/or buildings.

## **Task III – Permanent Storm Structures, Building and/or Utilities**

Task III will include the construction of the permanent stormwater structures, permanent drainage swales, and installation of the remaining secondary stormwater structures. Stormwater drainage structures (i.e., stormwater pond, bioretention area, trench drains, swales and culverts) will be protected from silt during construction via means that include the placement of silt fencing around the structures’ inlet points.

Proposed grades for storm utilities will be established.

Task III also includes the installation of the buildings and utilities that require trench and pit excavation. All utilities shall be extended to a close proximity of the proposed connection point or structure. Work shall be coordinated as necessary with local building officials having jurisdiction.

Throughout the construction of Task III, the procedures outlined in this SWPPP will be followed. Silt fencing will be installed, added to, and maintained as shown on the plans and around all disturbed areas parallel to the slope to minimize washouts and siltation of any adjacent surface water bodies.

## **Task IV – Final Grading, Stabilization, Utility Hook-ups**

Task IV includes final grading, connection of all utilities, and all remaining construction items. Once construction has been completed, final site stabilization will take place.

Upon final grading, all disturbed areas will be seeded immediately. Grass seeding is to be relative to the availability of water required for establishing healthy growth. Temporary rye grass seeding will be provided when required to prevent erosion via wind and/or runoff while other areas of permanent grass stands become established.

Throughout the construction of Task IV, the procedures outlined in this SWPPP will be followed. Silt fences will be installed, added to, and maintained as shown on the plans and around all disturbed areas parallel to the slope to minimize washouts and erosion of any adjacent surface water bodies.

Upon completion of Task IV, the Site Contractor will perform a final walkthrough of the site prior to demobilization. The Site Contractor will inspect all slopes disturbed and created during construction to assess the risk of washouts and erosion of nearby surface water bodies.

All steep slopes are to be seeded and stabilized by means of silt fence, check dams, and/or mulching blankets until a healthy stand of grass is established. When permanent stabilization is achieved, by grass or other plantings, temporary measures such as silt fences, etc. may be removed, provided these measures are no longer needed to prevent erosion. Stabilization must be undertaken no later than 14 days after construction activity has ceased.

#### **E. Stabilization Methods**

Certain components of construction have a higher risk for stormwater runoff resulting in soil erosion and sedimentation than others. The primary goal of those involved in the construction of this project is to identify these items and recognize the areas susceptible to erosion. It is the responsibility of those involved in the construction of this project to implement all stabilization measures necessary to mitigate the identified problems.

The contractor must initiate stabilization measures as soon as practical on portions of the site where construction activities have temporarily or permanently ceased. All sediment control measures shall be installed and maintained in accordance with the

### **Temporary Stabilization**

Temporary stabilization methods will be used to prevent erosion and sedimentation during construction. These methods must be used, as needed, on areas identified by the Pollution Prevention Team to be at risk for erosion and where such erosion may adversely affect downstream water quality.

The New York State Standards and Specifications for Erosion and Sediment Control, November 2016 defines some measures that may be used as temporary stabilization.

Silt fences, inlet protection and check dams will be utilized as temporary surface water management features and used during development to reduce erosion and to control sediment. They will also be used as necessary to reduce the sediment load in the receiving drainage ditches. Silt fence will be placed around the stockpile area, ten feet (10') from the toe of slope, until there is no longer a need for the stockpile area and all stored materials have been removed. Inlet protection will be placed around all catch basin and manhole inlets. Stone check dams will be placed in ditches, when deemed necessary, to control flow velocity and promote sedimentation. Temporary stabilization that will be converted to permanent stabilization features include the stone check dams. All other temporary stabilization measures can be removed once site stabilization is achieved.

See Drawing C-001 for additional SWPPP and Erosion and Sediment Control Notes.

## **Permanent Stabilization, Sediment and Erosion Control**

Permanent stabilization measures for the site include the permanent seeding of lawns and slope stabilization through the use of rolled erosion control products or riprap.

Permanent stormwater management features for the proposed development include stormwater ponds, infiltration basin, vegetated swales and conveyance systems (pipes). In all instances, the structures associated with the stormwater management system have been sized to accommodate peak flows from the appropriate storm events as required by the NYSDEC.

We are proposing rip rap protection at the outlets, as shown on Sheet C-703.

## **VII. NON-STORMWATER DISCHARGES**

Pursuant to Part I.E of the General Permit, some non-stormwater discharges are permitted; provided hazardous or toxic material spills have not occurred or have been adequately cleaned prior to discharge and detergents have not been used. All necessary pavement, building and vehicle wash waters will be discharged under the stipulations of this permit. High-pressure washes may be used to clean vehicles, buildings, and pavement. Detergents will not be used in waters that are not discharged into an acceptable sanitary sewer system.

During the dry season, dust control may be necessary to reduce respiratory discomfort associated with dust for workers and neighboring residents. Mature vegetative cover is the best means of controlling dust; however, water may be used on dry soils to reduce dust problems. The soils will be damp, but not saturated, to prevent dust control related runoff.

Dust may also be controlled by stone paving driveways and all access points to the construction-site frequented by construction vehicles. Mulch, including gravel mulch, may also be an effective means of controlling dust. Spray adhesives shall not be used for dust control on this site.

Vehicles may be periodically washed to reduce off-site tracking of sediments accumulated on construction vehicles. Wash waters must not contain any detergents.

## **VIII. BEST MANAGEMENT PRACTICES**

Throughout construction, care will be taken to ensure sediment does not enter surface water bodies and chemicals do not enter stormwater, potentially contaminating surface and groundwater supplies. The following Best Management Practices (BMP) will be observed to maintain responsible environmental practices on the construction site.

### **A. Good Housekeeping**

Good Housekeeping is essential to reducing the risk of contaminating runoff waters during every stage of construction. The General Contractor will ensure supervisors train each employee in good housekeeping practices as they pertain to the implementation of this Stormwater Pollution Prevention Plan.

Immediately following mobilization, the General Contractor will take an inventory of all equipment and containers containing hazardous or toxic materials and submit this inventory to the Owner to keep on site with this Stormwater Pollution Prevention Plan. This inventory will be updated regularly to reflect changes in the quantity or type of hazardous and toxic materials stored on site. In the event of a spill, the Spill Response Team can refer to the inventory if the contents of the spill are unknown.

All equipment will be operational while it is stored on site. Inspections will be conducted regularly to ensure all equipment is free of leaks and that oil and grease are not in contact with soils or stormwater. Portable equipment such as chain saws, drills, and hand tools must be placed within a trailer or under cover at the end of each workday.

A storage area shall be designated on site where all hazardous or toxic materials are stored. Each employee shall return the materials to the designated storage area following use. Chemicals, including gasoline, oil, grease, solvents and detergents will be stored on site in approved containers only. Used chemicals will be disposed of in refuse

containers and removed periodically. Containers will be regularly inspected to ensure the integrity of the container and seals to prevent leaks.

A scheduled clean-up will occur at the end of each work week. During this clean up, empty containers of solvents, oils, grease, paints and detergents will be disposed of, containers of gasoline will be placed in trailers where they are not in contact with stormwater, and the inventory will be updated. Empty containers will not be permitted on the ground.

#### **B. Preventative Maintenance**

All on-site vehicles must be inspected regularly for oil and grease leaks. All leaks will be repaired immediately upon obtaining the appropriate equipment. If the leak cannot be fixed immediately, it will be temporarily mitigated to prevent the flow of contaminants onto the soil and potentially into the stormwater. Drip pans shall be used when performing any maintenance or cleaning on construction vehicles.

#### **C. Spill Prevention and Response**

The safety of employees and neighbors shall be of utmost concern when hazardous or toxic chemicals are stored or utilized on site. Material Safety Data Sheets (MSDS) will be obtained for all toxic or hazardous substances that are stored on site to provide employees with a valuable database in assessing risk in the event of a spill.

Any temporary aboveground storage tanks on site shall have installed leak detection systems, secondary containment, corrosion protection, and undergo periodic monitoring. Tanks constructed of wood, concrete, aluminum, fiberglass reinforced plastic, as well as riveted or bolted steel tanks, are not permitted.

Most spills are minor spills. These spills are unintentional and, in most cases, can be cleaned with equipment such as mops or sponges. Should a spill occur, trained individuals shall be on-call at all times to mitigate the potential negative effects of a spill. The General Contractor will have trained employees knowledgeable in the location of absorbents, brooms, rags, and mops in the event of a small-scale spill. An inventory of equipment and its location will be posted in a visible location, as well as kept in close

proximity to this Pollution Prevention Plan. If the General Contractor does not have Hazardous Material trained employees on site, a firm that specializes in handling spills, soil and water contamination will be called.

After a spill occurs, all personnel not trained in hazardous materials spill response will be asked to evacuate the immediate area. The NYSDEC Spill Response Team will be called to investigate the spill and determine if additional actions should be taken to ensure the safety of personnel and nearby residents. Should any employee have a suspected injury, a local emergency squad must be contacted immediately.

**New York State Department of Environmental Conservation Spills Hotline  
1-800-457-7362**

**D. Sediment and Erosion Control**

Areas of the site where soil disturbance/construction activity will occur and where the disturbed area has the potential to discharge to surface waters of the State are required to implement the erosion and sediment control practices described herein.

**1. Silt Fencing**

Silt fencing or filter socks will be used on site to minimize sediment-laden stormwater from flowing to adjacent areas during construction. Silt fencing should be installed downslope of all disturbed areas. Initial site disturbance/clearing, if any, should be limited to that necessary to properly install silt fencing as shown on the Project Plans. Upon installation of silt fencing, clearing and grubbing operations may continue as necessary for demolition, utility and stormwater improvements, or initial site grading.

**2. Soil Stabilization**

Areas which have been graded to their final elevations shall be stabilized within fourteen (14) calendar days. For areas which will be paved, "stabilization" means the installation of acceptable sub-base. For lawn areas, "stabilization" refers to

an adequate layer of topsoil, seeding, and mulching. Silt fence shall remain in place and be maintained until a healthy lawn (80% cover) has been established.

### **3. Temporary Sediment Trap**

Temporary sediment traps are already established at the locations of the proposed ponds and infiltration basin. All runoff from disturbed areas will be directed to the temporary sediment trap during construction. When soils in the surrounding area have been stabilized, the sediment trap will be re-configured to the specifications for the proposed stormwater structures.

### **4. Temporary Stockpiles**

Construction materials prone to erosion (topsoil, sands, sub-base, etc.) shall be stored in the locations/staging areas delineated and/or described on the Project Plans. Silt fencing shall be installed as needed around stockpile areas prior to the commencement of construction.

### **5. Check Dams**

Temporary or permanent swales which have been graded to their final elevation may experience erosion prior to permanent stabilization. Check dams may be used to reduce erosive velocities in swales to prevent suspension and migration of sediment. Check dams will be installed after any geo-textile channel protection measures.

### **6. Adjunct Erosion Controls**

Straw bales and wattles may be used as check dams in any locations where runoff is channelized during construction to reduce flow velocity and erosion. These measures will be field located as necessary as construction progresses and will be removed once finished grades and permanent stormwater features have been established.

### **7. Slope Stabilization**

Geo-textile fabrics or jute mesh may be used to stabilize slopes with grades in excess of 3H:1V (33%). Geo-textile fabric will be installed only on slopes which

have received final grading, top soil, and seed. Proprietary products will be installed in accordance with all manufacturers' specifications.

#### **8. Channel Protection**

Geo-textile fabrics or jute mesh may be used to stabilize swales with grades in excess of 12H:1V (8.3%). Geo-textile fabric will be installed only on temporary or permanent swales which have received final grading, top soil, and seed. Proprietary products will be installed in accordance with all manufacturers' specifications.

#### **9. Concrete Washout Basins**

Temporary concrete washout basins shall be constructed to prevent migration and tracking of sediments off site as a result of concrete truck cleanout. This measure will be inspected daily and sediment buildup removed and disposed of properly.

Additional Erosion & Sediment control practices not listed above may be implemented for this project as deemed necessary. All sediment control measures shall be installed and maintained in accordance with the Project Plans, Appendix C, and/or the New York State Standards and Specifications for Erosion and Sediment Control, November 2016.

See Sediment Erosion Control Details and Notes in Appendix C for erosion control practices to be used for this project, including installation instructions. Erosion control practice feasibility and locations will be determined in the field as construction progresses.

### **IX. STORMWATER ANALYSIS**

#### **A. Water Quantity Methodology**

Stormwater calculations were conducted using the United States Department of Agriculture (USDA) Natural Resources Conservation Service's (NRCS) TR-20 method. A software program, HydroCAD 10.20-5c Stormwater Modeling System produced by HydroCAD Software Solutions LLC of Chocorua, New Hampshire, was used to perform the TR-20 calculations. The design storm is calculated as a 24-hour, 25-year, Type II

event having a rainfall intensity of 4.56” in Saratoga County, NY. The system is also evaluated under the 1-, 10- and 100-year storm events, having rainfall intensities of 2.24”, 3.72”, and 6.24”, respectively. Rainfall intensities are obtained from the Northeast Regional Climate Center (NRCC) and the Natural Resource Conservation Service (NRCS). These organizations collect and analyze modern rainfall data and provide downloadable rainfall data by county. Composite runoff coefficients and composite curve numbers were calculated based on standard SCS curve number tables for urban areas.

## **B. Existing Watershed Conditions**

The project’s existing watershed conditions are primarily comprised of two (2) distinct land uses: previously logged/disturbed area that was used for a staging area by New York State during the I-87 Exit 17 improvements and undeveloped areas include woodlands and grassed areas. Runoff generally flows from the site towards the existing low areas (wetlands) located throughout the site. Analysis of the existing conditions watershed resulted in identifying nine (9) distinct subcatchments, with common points of confluence, referred to herein as “Analysis Points.” These Analysis Points serve as the locations for which all existing and proposed peak discharge rates are based upon. Six (6) Analysis Points were identified. The total watershed analyzed is approximately 28.6 acres.

Composite curve numbers (CN) were developed for the Existing Conditions Watershed modeling by directly measuring the various surface coverages throughout the subcatchments, and assigning appropriate standard NRCS CN values based upon published tables. A summary of the existing peak discharge rates associated with each Analysis Point is provided in Table 1 at the end of this section.

## **Farmstand Area**

### **Subcatchment (1)**

### **Analysis Point-1**

Subcatchment-1 is located in the eastern portion of the Farmstand project site and drains to Analysis Point-1. Subcat-1 consists of mostly forested, grassed, with some residence and roadway areas consisting of HSG A and D soils. Runoff generally flows

in an easterly direction towards existing sediment trap 1ST. Runoff is then directed to sediment trap 2ST via swale 1R.

### **Subcatchment (2a)**

### **Analysis Point-1**

Subcatchment-2a is located east of Subcatchment-1 and drains to Analysis Point-1. Subcat-2a consists of mostly grassed areas consisting of HSG C & D soils. Runoff generally flows in a northeasterly direction towards sediment trap 2ST via swale 1R.

### **Subcatchment (2b)**

### **Analysis Point-1**

Subcatchment-2b is located east of Subcatchment-2a and drains to Analysis Point-1. Subcat-2b consists of mostly grassed and gravel areas consisting of HSG C & D soils. Runoff generally flows in a northeasterly direction towards sediment trap 2ST.

### **Subcatchment (3)**

### **Analysis Point-2**

Subcatchment-3 is located south of Subcatchment-2b and drains to Analysis Point-2. Subcat-3 consists of mostly grassed and gravel areas consisting of HSG D soils. Runoff generally flows in an easterly direction towards Analysis Point-2.

## **Greenhouse Area**

### **Subcatchment (4a)**

### **Analysis Point-3**

Subcatchment-4a is located in the north portion of the Greenhouse project site and drains to Analysis Point-3. Subcat-4a consists of forested, grassed, bare soil, paved, and gravel areas consisting of HSG A & D soils. Runoff generally flows in a southeasterly direction towards sediment trap 3ST and eventually into sediment trap 4ST.

**Subcatchment (4b)****Analysis Point-3**

Subcatchment-4b is located south of subcatchment 4a and drains to Analysis Point-3. Subcat-4b consists of forested and grassed areas consisting of HSG D soils. Runoff generally flows in a southeasterly direction towards sediment trap 4ST.

**Subcatchment (5)****Analysis Point-4**

Subcatchment-5 is located southeast of subcatchment 4b and drains to Analysis Point-4. Subcat-5 consists of forested, grassed, and bare soil areas consisting of HSG A & D soils. Runoff generally flows in a southeasterly direction towards sediment trap 5ST.

**Subcatchment (6)****Analysis Point-5**

Subcatchment-6 is located west of subcatchment 7 and drains to Analysis Point-5. Subcat-6 consists of grassed areas consisting of HSG D soils. Runoff generally flows in a southeasterly direction towards Analysis Point-5.

**Subcatchment (7)****Analysis Point-6**

Subcatchment-7 is located east of subcatchment 6 and drains to Analysis Point-6. Subcat-7 consists of wood, grassed, and bare soil areas consisting of HSG A & D soils. Runoff generally flows in a southeasterly direction towards Analysis Point-6.

Calculated existing peak discharge rates are summarized below in Table 1.

**Table 1**  
Existing Peak Runoff Rates

| Analysis Point | 24-Hour Storm Event |            |            |             |
|----------------|---------------------|------------|------------|-------------|
|                | 1-Yr Rate           | 10-Yr Rate | 25-Yr Rate | 100-Yr Rate |
| AP-1           | 0.00                | 0.62       | 3.25       | 9.61        |
| AP-2           | 0.10                | 0.27       | 0.37       | 0.58        |
| AP-3           | 1.77                | 5.52       | 9.22       | 12.22       |
| AP-4           | 0.00                | 0.00       | 0.00       | 0.00        |
| AP-5           | 0.33                | 0.99       | 1.41       | 2.30        |
| AP-6           | 1.01                | 5.13       | 8.15       | 14.93       |

\*Rates are reported in cubic feet per second (ft<sup>3</sup>/s).

### C. Proposed Conditions

The project's proposed watershed conditions are primarily comprised of three (3) distinct land uses: greenhouse development area, farmstand development area and undeveloped areas including woodlands and grassed areas. Runoff generally flows south from the site towards the proposed stormwater treatment practices. Analysis of the proposed conditions watershed resulted in identifying thirteen (13) distinct subcatchments, with common points of confluence, referred to herein as "Analysis Points." These Analysis Points serve as the locations for which all existing and proposed peak discharge rates are based upon. Six (6) Analysis Points were identified. The total watershed analyzed is approximately 28.6 acres.

Composite curve numbers (CN) were developed for the Proposed Conditions Watershed modeling by directly measuring the various surface coverages throughout the subcatchments, and assigning appropriate standard NRCS CN values based upon published tables. A summary of the proposed peak discharge rates associated with each Analysis Point is provided in Table 2 at the end of this section.

### Farmstand Area

#### Subcatchment (1)

#### Analysis Point-1

Subcatchment-1 is located in the eastern portion of the Farmstand project site and drains to Analysis Point-1. Subcat-1 consists of mostly forested, grassed, with some

residence and roadway areas consisting of HSG A and D soils. Runoff generally flows in an easterly direction towards existing sediment trap 1ST. Runoff is then directed to sediment trap 2ST via swale 1R.

**Subcatchment (2a)** **Analysis Point-1**

Subcatchment-2a is located east of Subcatchment-1 and drains to Analysis Point-1. Subcat-2a consists of grassed and paved areas of HSG C & D soils. Runoff generally flows in a northeasterly direction towards RRv swale 2R and into stormwater pond 3P. Discharge from stormwater pond 3P then enters sediment trap 2P.

**Subcatchment (2b)** **Analysis Point-1**

Subcatchment-2b is located east of Subcatchment-1 and drains to Analysis Point-1. Subcat-2b consists of mostly grassed and gravel areas consisting of HSG C & D soils. Runoff generally flows in an easterly direction towards sediment trap 2ST via swale 1R.

**Subcatchment (2c)** **Analysis Point-1**

Subcatchment-2c is located south of Subcatchment-2b and drains to Analysis Point-1. Subcat-2c consists of mostly grassed and paved areas consisting of HSG C & D soils. Runoff generally flows in a northeasterly direction towards RRv swale 3R and into stormwater pond 3P. Discharge from stormwater pond 3P then enters sediment trap 2P.

**Subcatchment (2d)** **Analysis Point-1**

Subcatchment-2d is located southeast of Subcatchment-2c and drains to Analysis Point-1. Subcat-2d consists of mostly grassed and gravel areas consisting of HSG C & D soils. Runoff generally flows in a northeasterly direction towards sediment trap 2ST.

**Subcatchment (2e)** **Analysis Point-1**

Subcatchment-2e is located south of Subcatchment-2c and drains to Analysis Point-1. Subcat-2e consists of mostly grassed and paved areas consisting of HSG D soils.

Runoff generally flows in a easterly direction towards RRv swale 5R and eventually into stormwater pond 3P via swale 3R. Discharge from stormwater pond 3P then enters sediment trap 2P.

**Subcatchment (3)** **Analysis Point-2**

---

Subcatchment-3 is located south of Subcatchment-2e and drains to Analysis Point-2. Subcat-3 consists of mostly grassed and gravel areas consisting of HSG D soils. Runoff generally flows in an easterly direction towards Analysis Point-2.

**Greenhouse Area**

**Subcatchment (4a)** **Analysis Point-3**

---

Subcatchment-4a is located in the north portion of the Greenhouse project site and drains to Analysis Point-3. Subcat-4a consists of forested, grassed, bare soil, and paved areas consisting of HSG A & D soils. Runoff generally flows in a southeasterly direction towards RRv swale R11 and into stormwater pond 4P.

**Subcatchment (4b)** **Analysis Point-3**

---

Subcatchment-4b is located south of subcatchment 4a and drains to Analysis Point-3. Subcat-4b consists of wooded and grassed areas consisting of HSG D soils. Runoff generally flows in a southeasterly direction towards Analysis Point-3.

**Subcatchment (5a & 5b)** **Analysis Point-5**

---

Subcatchments-5a & 5b are located southeast of subcatchment 4a and drain to Analysis Point-4. Subcat-5a & 5b consist of wooded, grassed, paved and bare soil areas consisting of HSG A & D soils. Runoff generally flows in a southeasterly direction towards RRv swales R7 and R8 and into infiltration basin 5P.

**Subcatchment (6)****Analysis Point-5**

Subcatchment-6 is located west of subcatchment 7 and drains to Analysis Point-5. Subcat-6 consists of grassed, paved and bare soil areas consisting primarily of HSG D soils. Runoff generally flows in a southeasterly direction towards RRv swale R9 and into stormwater pond 6P.

**Subcatchment (7)****Analysis Point-6**

Subcatchment-7 is located east of subcatchment 6 and drains to Analysis Point-6. Subcat-7 consists of grassed areas consisting of HSG A & D soils. Runoff generally flows in a southeasterly direction towards Analysis Piont-6.

Calculated proposed peak discharge rates are summarized below in Table 2.

**Table 2**  
Proposed Peak Runoff Rates

| Analysis Point | 24-Hour Storm Event |            |            |             |
|----------------|---------------------|------------|------------|-------------|
|                | 1-Yr Rate           | 10-Yr Rate | 25-Yr Rate | 100-Yr Rate |
| AP-1           | 0.01                | 0.54       | 2.26       | 9.04        |
| AP-2           | 0.04                | 0.10       | 0.14       | 0.21        |
| AP-3           | 0.18                | 0.52       | 2.00       | 7.72        |
| AP-4           | 0.00                | 0.00       | 0.00       | 0.00        |
| AP-5           | 0.09                | 0.64       | 0.88       | 2.30        |
| AP-6           | 0.00                | 0.34       | 1.28       | 4.49        |

\*Rates are reported in cubic feet per second (ft<sup>3</sup>/s).

**D. Proposed Water Quality and Detention Measures**

The water quality and detention practices have been sized adequately to receive flows from the one-, ten-, twenty-five, and one-hundred-year storms. Detailed calculations are included in Appendix E. See Sheets C-200-201, C-702, and C-705-707 for pond grading and stormwater details.

The peak elevations and storage volumes for the proposed structures are summarized in Table 3 below.

**Table 3  
Proposed Stormwater Structures**

| <b>Proposed Stormwater Structures</b>                 |           |         |           |         |           |         |           |         |
|---|-----------|---------|-----------|---------|-----------|---------|-----------|---------|
| Structure   | 1-yr      |         | 10-yr     |         | 25-yr     |         | 100-yr    |         |
|   | Elevation | Storage | Elevation | Storage | Elevation | Storage | Elevation | Storage |
| WQv Pond 3P<br>Top of Storage<br>(312.95)             | 311.02    | 4,468   | 311.47    | 6,183   | 311.73    | 7,269   | 311.95    | 8,256   |
| WQv Pond 4P<br>Top of Storage<br>(339.75)             | 337.20    | 1,753   | 338.25    | 4,548   | 338.58    | 5,697   | 338.72    | 6,223   |
| Bioretention Area<br>5P<br>Top of Storage<br>(331.75) | 326.44    | 1,444   | 328.31    | 6,516   | 329.16    | 9,999   | 330.53    | 17,528  |
| WQv Pond 6P<br>Top of Storage<br>(332.75)             | 330.28    | 4,143   | 330.79    | 6,053   | 331.17    | 7,639   | 331.73    | 10,479  |

\*All elevations reported are in feet (ft), all storage volumes reported are in cubic-feet (cu ft)

**E. Pre/Post-Condition Analysis**

Table 4, below, is a summary of the existing and proposed peak rates of discharge from the project site.

**Table 4**  
**Pre/Post Comparison**  
**Peak Runoff Rates**

| Analysis Point |          | 24-Hour Storm Event |            |            |             |
|----------------|----------|---------------------|------------|------------|-------------|
|                |          | 1-Yr Rate           | 10-Yr Rate | 25-Yr Rate | 100-Yr Rate |
| AP-1           | Existing | 0.00                | 0.62       | 3.25       | 9.61        |
|                | Proposed | 0.01                | 0.54       | 2.26       | 9.04        |
| AP-2           | Existing | 0.10                | 0.27       | 0.37       | 0.58        |
|                | Proposed | 0.04                | 0.10       | 0.14       | 0.21        |
| AP-3           | Existing | 1.77                | 5.52       | 9.22       | 12.22       |
|                | Proposed | 0.18                | 0.52       | 2.00       | 7.72        |
| AP-4           | Existing | 0.00                | 0.00       | 0.00       | 0.00        |
|                | Proposed | 0.00                | 0.00       | 0.00       | 0.00        |
| AP-5           | Existing | 0.33                | 0.99       | 1.41       | 2.30        |
|                | Proposed | 0.09                | 0.64       | 0.88       | 2.30        |
| AP-6           | Existing | 1.01                | 5.13       | 8.15       | 14.93       |
|                | Proposed | 0.00                | 0.34       | 1.28       | 4.49        |

\*Rates are reported in cubic feet per second (ft<sup>3</sup>/s).

Calculations indicate the peak runoff rate will be reduced or maintained from all discharge points for the one, ten, twenty-five, and one hundred-year storm events.

Analysis Point AP-1 shows a 0.01 cfs increase in discharge. This is due to the need for a low flow orifice to maintain permanent pool elevation. There will need to be a discharge from this pond for a 1-yr event. A 0.00 cfs discharge cannot be avoided and the increase will have no detrimental impact to adjacent properties..

## **X. STORMWATER ANALYSIS CONCLUSION**

The following New York Stormwater sizing criteria have been met.

#### **A. Water Quality Requirement**

The required water quality volume for the project is provided in Standard Stormwater Practices. See Appendix F for proposed Water Quality Control Calculations and C-702 and C-705-707 for stormwater structure details.

#### **B. Runoff Reduction Volume (RRv) Requirement**

The minimum required Runoff Reduction Volume is provided in the proposed Vegetated Swales, cistern and infiltration basin. See Appendix F for proposed RRv Calculations and summary. See C-702 and C-705-707 for stormwater structure details.

#### **C. Channel Protection Requirement**

Ponds 3P and 6P provide over 24 hours of detention time for channel protection by the plug flow measure during the 1-year storm event.

Channel protection is not required for Pond 4P as the 1-year storm event runoff is less than 2.0 cfs.

Infiltration basin 5P meets Channel Protection requirements as the 1-yr storm event is infiltrated into the surrounding soils, there is no surface discharge from the infiltration basin.

#### **D. Overbank Flood Requirement**

The peak discharge rates for the 10-year storm event will be reduced or maintained from its predevelopment rates for all analysis points as illustrated in Table 4, Pre/Post Comparison Peak Runoff Rates.

## **E. Extreme Storm Requirement**

The peak discharge rates for the 100-year storm event will be reduced or maintained from its predevelopment rates for all analysis points as illustrated in Table 4, Pre/Post Comparison Peak Runoff Rates.

As a result of the proposed improvements, downstream storm facilities and properties will not be adversely impacted.

# **XI. POLLUTION PREVENTION PLAN IMPLEMENTATION**

## **A. Employee Training**

All employees on site will be aware of the stipulations of this stormwater pollution prevention report as it pertains to their everyday activities. All employees are required to be able to recognize potential problems and have the ability to provide either temporary or permanent stabilization measures, as appropriate, to mitigate stormwater runoff before problems occur.

## **B. Materials Inventory**

During construction, temporary structures, such as construction trailers, may be moved on site to store items such as paints, solvents, and gasoline pertinent to the continuation of construction activities. The intention of these structures is to shelter potential contaminants from stormwater and reduce the potential of toxic chemicals from entering the stormwater runoff due to construction activities.

Fuel for construction equipment shall either be obtained from a licensed distributor of petroleum products or from an approved aboveground storage tank on site. A distributor may be contracted to arrive on site periodically and fill all equipment as necessary. All distributors of petroleum products must have adequate liability insurance to mitigate and clean up any spills that occur on site as well as obtain appropriate permits and licenses from the NYSDEC.

Oil and other petroleum products may be stored on site in limited quantities to ensure the continued operation of construction equipment in the event a scheduled delivery is unavailable. Items will be stored in their original containers, within temporary structures, and will not be exposed to stormwater. Used oil and petroleum products will be stored in approved containers until recycled or disposed of at an approved disposal facility.

Fuel from construction vehicles may come into contact with stormwater when vehicles are stored outside. Good housekeeping and preventative maintenance procedures will be implemented to ensure fuel spills and leaks are minimized during refueling and storage. Any small-scale fuel or oil spills must be remedied immediately and contaminated soils will be disposed of appropriately. The designated spill prevention and response team shall handle large-scale fuel spills.

Paints may be stored on site to mark the location of utilities. All paints will be stored in original containers and disposed of when empty.

Construction waste and other trash will be removed from the site weekly.

Solvents and detergents may be stored on site that will be used for regular cleaning and maintenance of construction vehicles or temporary structures. After use, solvents will be disposed of in approved containers and removed from the site at scheduled intervals. Vehicle wash water that contains detergents will not be permitted on this site.

Temporary sanitary facilities may be located on site for construction workers. This facility shall be located in an accessible and visible location. Such a facility shall be leak and tip proof. A waste management company may be contracted to arrive on site and provide the routine pumping and sanitization of the facility. Such a company shall have adequate liability insurance to mitigate and clean up any spills which occur on site, as well as appropriate permits and licenses from the NYSDEC.

### **C. Site Inspections**

All employees on site will be aware of the stipulations of this stormwater pollution prevention report as it pertains to everyday construction activities. All employees will be able to recognize potential problems and have the ability to provide either temporary or

permanent stabilization measures, as appropriate, to mitigate any potential problems related to stormwater runoff before they occur.

The operator must have a qualified professional conduct an assessment of the site prior to the commencement of construction, and certify in an inspection report that the appropriate erosion and sediment controls described in this SWPPP and in the Contract Documents have been adequately installed or implemented to ensure overall preparedness of the site for the commencement of construction. A qualified professional is defined as a Professional Engineer or Landscape Architect licensed to practice in New York State, or is a Certified Professional in Erosion and Sediment Control (CPESC).

**Once construction begins, regular inspection of construction activities by a qualified professional is required at least once every 7 days to ensure problems regarding chemical exposure, erosion and sedimentation are found before sedimentation occurs.**

It is the responsibility of the Pollution Prevention Team to continuously monitor construction activities to ensure the measures outlined in the report are being implemented. Additional inspections are necessary when construction in an area is complete, when construction in an area commences, or when there is a change of staff.

Areas which have not been fully stabilized, areas used for materials storage and all structural stormwater control measures, must be inspected once every seven calendar days to monitor erosion and assess the risk of sedimentation. Areas where construction vehicles frequently enter and exit the site will be inspected to ensure sediments are not being tracked off site, and that the roadways remain in good condition.

An example of the weekly SWPPP Inspection Form can be found in Appendix D of this report. Maintenance Inspection Checklists pertaining to stormwater structures may also be used during weekly construction activities inspections to assist in the site inspection process. These checklists can be found in Appendix D of this report.

Each month, a thorough site evaluation shall be performed to determine the continued applicability of the permit and assess the need to make any changes that have not

already been reflected in this Stormwater Pollution Prevention Plan. The Stormwater Pollution Prevention Plan will be reviewed to evaluate its overall effectiveness in preventing sediment-laden stormwater runoff. Temporary and permanent stabilization methods will be assessed and new methods will be established should any method be determined to be inadequate. A consultant may be retained to review this plan and the implementation of this plan on site as well as make any revisions or suggestions necessary to ensure the Stormwater Pollution Prevention Plan is performing optimally. A SWPPP Revision Form is to be used to document SWPPP changes. See Appendix D..

The operator must maintain a record of all inspection reports in a site log book. The site log book must be maintained on site and be made available to the permitting authority upon request.

#### **D. Pre- and Post-Construction Maintenance Requirements**

Maintenance will be necessary to ensure the structural stabilization measures and other components of the stormwater system remain optimally functional and continue to reduce the risk of sediment loading of surface water bodies.

During construction, maintenance of the stabilization measures shall be the responsibility of the General Contractor or appropriate subcontractors.

Silt fences/silt socks must be inspected regularly to ensure that they are still effective and their capability to reduce stormwater runoff has not been reduced due to prolonged sun exposure.

Stormwater conveyance structures shall be cleaned out periodically to prevent the collection of sediment that will reduce the maximum flow. Silt fencing, or other approved measures, will be used to prevent sediment entering swales, pipes, grates or the inlets of stormwater structures. Sediment must be removed from structures or traps. Sediments removed from erosion control practices and stormwater structures may be used as fill on site during maintenance activities. The remaining sediment may be removed from the site.

When construction is complete, Shangri-La Real Estate Holdings shall assume responsibility for maintaining all proposed stormwater structures. The contact regarding maintenance of the stormwater systems is:

**Shangri-La Real Estate Holdings, LLC  
Contact: Orson Klender  
10 Licardo Lane  
Saratoga Springs, New York 12866**

Maintenance Inspection Checklists pertaining to stormwater structures can be found in Appendix D of this report.

**Maintenance intervals are outlined on the checklists.**

**In general, inspections should be conducted yearly to ensure the stormwater systems are operating optimally.**

Should staff or individuals be unavailable, both during and after construction, to inspect and maintain the stabilization measures described in this report, a firm shall be contracted to perform this maintenance.

In addition to maintenance inspections, the owner must post signs for all post-construction stormwater practices in the immediate vicinity of the practice. The sign must be conspicuous, legible, and not less than 18 inches by 24 inches bearing the following information:

**STORMWATER MANAGEMENT PRACTICE – *(name of practice)***

**Project Identification – *(SPDES Construction Permit #)***

**Must be Maintained in Accordance with Operation and Maintenance Plan**

**DO NOT REMOVE OR ALTER**

## **E. Progress Reports**

Progress reports will be completed by the General Contractor and all subcontractors weekly to document any conditions which may affect adherence to the construction schedule and may ultimately result in changes to the Stormwater Pollution Prevention Plan.

Each progress report must contain the project, date, weather conditions and a brief description of progress made throughout the week, including the use of temporary and permanent stabilization measures on all exposed soils.

The progress reports will be filed with this Stormwater Pollution Prevention Plan on site until final stabilization is complete. The progress reports will be retained for a minimum period of three years following final stabilization. A sample SWPPP Weekly Progress Report is included in Appendix D of this report.

## **F. Permit Coverage Termination**

Upon achieving final stabilization, the General Contractor must perform a final walkthrough of the site prior to demobilization. The General Contractor will verify that all disturbed surfaces have been stabilized and all soil restoration practices have been completed in accordance with this SWPPP and the SPDES General Permit.

After completing the final walkthrough, a Notice of Termination (NOT) form must be submitted by the Owner to the NYSDEC Division of Water in order to terminate the permit coverage.

This SWPPP and all associated forms prepared in conjunction with this SWPPP must be retained for a period of five (5) years from the date that the New York State Department of Environmental Conservation receives a complete Notice of Termination.

## **APPENDIX A**

### **NOTICE OF INTENT**

Printed Copy of the e-Filed NOI to be inserted once NOI is submitted.  
NOI will be submitted upon project approval.

**APPENDIX B**

**CONTRACTOR / SUBCONTRACTOR PERMIT CERTIFICATION**

# Contractor / Subcontractor SPDES Permit Certification

Project: \_\_\_\_\_

Town, Village, City: \_\_\_\_\_

County: \_\_\_\_\_

Check Applicable Box:            Prime Contractor             Subcontractor

Name of Contractor: \_\_\_\_\_

Address: \_\_\_\_\_

City: \_\_\_\_\_ State: \_\_\_\_\_ Zip: \_\_\_\_\_

Phone: \_\_\_\_\_ Fax: \_\_\_\_\_

**Mandatory Certification:** The SPDES General Permit for Stormwater Discharges from Construction Activities (Permit No. GP-0-20-001) requires the Prime Contractor (and subcontractors) to certify they understand the Stormwater Pollution Prevention Plan (SWPPP), the General Permit conditions, and their responsibilities for compliance. The certification must be signed prior to performing any contract work. The certification shall be signed by an Owner, Principal, President, Secretary or Treasurer of the firm.

*"I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the qualified inspector during a site inspection. I also understand that the owner or operator must comply with the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater discharges from construction activities and that it is unlawful for any person to cause or contribute to a violation of water quality standards. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"*

Signature: \_\_\_\_\_ Date: \_\_\_\_\_

Name: \_\_\_\_\_ Title: \_\_\_\_\_

The SPDES General Permit also requires the Prime Contractor to identify at least one trained individual who will be responsible for implementing the SWPPP and who shall be on-site on a daily basis when soil disturbance activities are being performed. (Prior training is not required if the trained individual is a licensed Professional Engineer, licensed Landscape Architect, or CPESC.) Provide the name and title of the trained individual who will be on-site and responsible for SWPPP implementation on this Contract:

Name/Title of Trained Individual: \_\_\_\_\_

Name of Training Course: \_\_\_\_\_

Training Provider: \_\_\_\_\_

Date of Training: \_\_\_\_\_

CLA SITE, PC

LIC. NO.  
CLA SITE, PC

## GENERAL & LAYOUT NOTES

- IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO FAMILIARIZE THEMSELVES WITH THE SITE AND ALL EXISTING CONDITIONS SURROUNDING IT AND THEREON.
- THE UNDERGROUND STRUCTURES AND UTILITIES SHOWN ON THESE PLANS HAVE BEEN PLOTTED FROM AVAILABLE SURVEYS AND RECORD MAPS. THE UNDERGROUND STRUCTURES AND UTILITIES SHOWN ON THIS MAP ARE NOT CERTIFIED TO THE ACCURACY OF THEIR LOCATION OR COMPLETENESS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION AND EXTENT OF ALL UNDERGROUND STRUCTURES AND UTILITIES PRIOR TO ANY EXCAVATION OR CONSTRUCTION ACTIVITIES TAKING PLACE.
- THE CONTRACTOR SHALL NOTIFY DIG SAFELY NEW YORK (800-962-7962) FOR A UTILITY STAKE-OUT THREE (3) WORKING DAYS PRIOR TO ANY EXCAVATION, DRILLING, OR BLASTING.
- WRITTEN DIMENSIONS HAVE PRECEDENCE OVER SCALED DIMENSIONS. THE CONTRACTOR SHALL USE CAUTION WHEN SCALING REPRODUCED PLANS. IN THE CASE OF A CONFLICT BETWEEN THIS PLAN SET AND ANY OTHER DRAWING, DETAIL, OR SPECIFICATION THE ENGINEER SHALL BE NOTIFIED IMMEDIATELY FOR CLARIFICATION.
- ALL DIMENSIONS TO FACE OF CURB OR BUILDING ARE AT 90° FROM FACE UNLESS OTHERWISE NOTED.
- SITE WORK SHALL BE CONSTRUCTED FROM A COMPLETE SET OF PLANS. NOT ALL FEATURES ARE DETAILED ON EVERY PLAN. THE ENGINEER IS TO BE NOTIFIED OF ANY CONFLICT WITH THIS PLAN SET.
- ALL WORK SHALL CONFORM WITH THE REQUIREMENTS OF FEDERAL TITLE 29, PART 1929, "SAFETY AND HEALTH REGULATIONS FOR CONSTRUCTION" (OSHA).
- THE CONTRACTOR SHALL CONSULT THE DESIGN LANDSCAPE ARCHITECT BEFORE DEVIATING FROM THESE PLANS.
- IF SUSPICIOUS, CONTAMINATED OR HAZARDOUS MATERIAL IS ENCOUNTERED DURING CONSTRUCTION ACTIVITIES ALL WORK SHALL STOP AND THE TOWN OF MOREAU AND THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION SHALL BE NOTIFIED IMMEDIATELY. WORK SHALL NOT RESUME UNTIL THE OWNER HAS OUTLINED APPROPRIATE ACTION FOR DEALING WITH THE MATERIAL AND THE PLANS ARE MODIFIED AS NECESSARY.
- THE CONTRACTOR SHALL TAKE PRECAUTIONS TO MAINTAIN A MINIMUM OF TWO (2) FEET OF COVER OVER ALL EXISTING UTILITIES DURING CONSTRUCTION.
- ALL AREAS DISTURBED OR DAMAGED AS PART OF THIS PROJECT'S CONSTRUCTION AND WHICH ARE OUTSIDE OF THE PROJECT LIMITS SHALL BE RESTORED, AT THE CONTRACTOR'S EXPENSE, TO THE SATISFACTION OF THE OWNER OR THE OWNER'S REPRESENTATIVE.
- ALL WORK MUST CONFORM TO ALL FEDERAL, STATE AND MUNICIPAL CODES, SPECIFICATIONS, ORDINANCES, RULES AND REGULATIONS.
- THE CONTRACTOR IS RESPONSIBLE FOR TRAFFIC PROTECTION AND MAINTENANCE, INCLUDING ADEQUATE USE OF SIGNS, BARRIERS, AND FLAG PERSONS DURING WORKING AND NON-WORKING HOURS UNTIL CONSTRUCTION IS COMPLETED.
- THE CONTRACTOR IS RESPONSIBLE FOR COORDINATING WORK WITHIN ANY RIGHT-OF-WAY WITH THE APPROPRIATE COUNTY OR STATE AGENCIES.
- CONTRACTOR SHALL REPLACE IN KIND ALL PAVEMENT STRIPING DISTURBED AS A RESULT OF CONSTRUCTION.

## UTILITY NOTES

- RIMS, GRATES, INVERTS, CLEARANCES AND LOCATION AT CROSSINGS MUST BE VERIFIED PRIOR TO BEGINNING CONSTRUCTION. ANY DISCREPANCIES MUST BE BROUGHT TO THE ENGINEER'S ATTENTION.
- ALL CONSTRUCTION STAKE OUT SHALL BE COORDINATED WITH CLA SITE.
- THE CONTRACTOR SHALL TAKE CARE TO NOT DAMAGE EXISTING UTILITIES. ANY DAMAGED UTILITIES SHALL BE REPAIRED IMMEDIATELY BY THE CONTRACTOR AT THE CONTRACTOR'S EXPENSE.
- ALL UTILITY LOCATIONS, EXISTING SEWERS, WATER, TELEPHONE, GAS, ETC. MUST BE LOCATED PRIOR TO ANY CONSTRUCTION. ELEVATIONS MUST BE VERIFIED PRIOR TO CONSTRUCTION.

## SOIL EROSION PREVENTION AND SEDIMENT CONTROL

- IF CONSTRUCTION ACTIVITIES ARE DISCONTINUED, TEMPORARY GRADING SHALL BE SEEDED AND MULCHED, A.O.B.E. THE AREAS SHALL BE SEEDED WITH AN APPROPRIATE PERENNIAL GRASS SEED MIX, A.O.B.E., AND SHALL BE MULCHED WITH STRAW WITHIN 14 DAYS OF THE TIME CONSTRUCTION ACTIVITIES WERE TEMPORARILY DISCONTINUED. MULCH SHALL BE MAINTAINED UNTIL A SUITABLE VEGETATIVE COVER IS ESTABLISHED.
- WHEN FINAL GRADING IS COMPLETE THE CONTRACTOR SHALL COMPLETE THE WORK OF SEEDING AND PLANTING WITHIN ONE WEEK OR OTHERWISE STABILIZE THE AREA IF THE SEASON IS NOT APPROPRIATE FOR SEED ESTABLISHMENT. IN THE EVENT SEED AND PLANTING ESTABLISHMENT CAN NOT BE COMPLETED THE CONTRACTOR SHALL STABILIZE THE AREA WITHIN ONE WEEK OF COMPLETING THE FINAL GRADING, WITH STRAW MULCH, OR OTHER APPROVED OR SPECIFIED MEANS UNTIL TURF ESTABLISHMENT CAN BE DONE.
- PERIODIC CLEANING OF TEMPORARY SOIL EROSION AND WATER POLLUTION CONTROL DEVICES MAY BE NECESSARY.
- ALL SOIL AND EROSION AND SEDIMENT CONTROL MEASURES SHALL BE PLACED PRIOR TO STARTING EARTHWORK OPERATIONS AND SHALL REMAIN IN PLACE UNTIL SLOPES ARE STABILIZED WITH SEEDING AND/OR OTHER SLOPE PROTECTION.
- SOIL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE USED AS NECESSARY AND THEY SHALL REMAIN IN PLACE UNTIL THE NEW SLOPES HAVE BEEN STABILIZED BY EITHER SEEDING OR SLOPE PROTECTION.
- SOIL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE USED FOR ALL INLETS. CONTROLS SHALL REMAIN IN PLACE UNTIL THE SLOPES DRAINING TO THE INLET HAVE BEEN STABILIZED BY EITHER PAVING, SEEDING, OR SLOPE PROTECTION.
- IN THE EVENT DE-WATERING OPERATIONS BECOME NECESSARY, A DE-WATERING DISCHARGE BASIN WILL BE REQUIRED UNLESS THE PUMP DISCHARGE IS CLEAR AND FREE OF SEDIMENT. LOCATION AND DESIGN TO BE APPROVED BY THE LANDSCAPE ARCHITECT.
- RING ANY TEMPORARY STOCKPILES OF ERODIBLE MATERIAL WITH STRAW BALES/SILT FENCE, AS SHOWN, TO CONTAIN ANY EROSION OF THE PILE. PILES LEFT UNDISTURBED FOR 14 DAYS OR MORE SHALL BE STABILIZED WITH A TEMPORARY SEEDING OR OTHER COVER.
- ALL ERODED SOIL SHALL BE PREVENTED FROM ENTERING STORM DRAINS, DITCHES, OR WATERCOURSES.
- TEMPORARY EROSION CONTROL SHALL BE PROVIDED FOR ALL DISTURBED AREAS IN ACCORDANCE WITH THE "NEW YORK GUIDELINES FOR URBAN EROSION AND SEDIMENT CONTROL." THE TEMPORARY EROSION CONTROL MEASURES SHALL BE MAINTAINED CONTINUOUSLY UNTIL PERMANENT CONTROL MEASURES ARE IN SERVICE. INFILTRATION DEVICES SHALL BE PROTECTED FROM SILTATION DURING THE PERIOD OF CONSTRUCTION AND UNTIL THE SITE IS SUCCESSFULLY REVEGETATED BY USE OF SILT SCREENS, INLET PROTECTION DEVICES, SEDIMENT DETENTION PONDS OR OTHER SUITABLE EROSION CONTROL MEASURES.
- STAGING OF CONSTRUCTION TO FACILITATE EROSION CONTROL SHALL BE REQUIRED. ONLY THOSE AREAS WHERE CONSTRUCTION IS ACTIVELY OCCURRING SHALL REMAIN OPEN AND UNVEGETATED. ALL AREAS THAT ARE NOT

WITHIN AN ACTIVE CONSTRUCTION AREA SHALL BE MULCHED AND STABILIZED OR SHALL BE MULCHED AND REVEGETATED. AN ACTIVE CONSTRUCTION AREA IS DEFINED AS ONE THAT HAS BEEN SUBSTANTIAL CONSTRUCTION WITHIN THE PAST SEVEN CALENDAR DAYS. MULCHING OR REVEGETATION FOR EROSION CONTROL SHALL BE COMPLETED WITHIN 10 DAYS FOLLOWING THE LAST SUBSTANTIAL CONSTRUCTION ACTIVITY.

COMPLIANCE WITH THE FOLLOWING RESTRICTIONS SHALL BE REQUIRED.

- NO VEGETATION SHALL BE FELLED INTO ANY LAKE, POND, RIVER, STREAM OR INTERMITTENT STREAM AND IF INADVERTENTLY FELLED INTO ONE OF THESE WATER BODIES, SHALL BE REMOVED IMMEDIATELY FROM THE WATER BODY. THE REMOVAL OF DEAD OR DYING, DISEASED TREES OR TREES PRESENTING A HEALTH OR SAFETY HAZARD SHALL NOT BE EXEMPT FROM THIS REQUIREMENT.
- WITHIN 500 FEET OF THE MEAN HIGH WATER MARK OF ANY LAKE, POND, RIVER, STREAM, OR WETLAND, NO LAND AREA, INCLUDING AREAS STOCKPILED WITH EARTHEN MATERIALS, WHICH HAS BEEN CLEARED MAY BE MADE OR LEFT DEVOID OF GROWING VEGETATION FOR MORE THAN 24 HOURS WITHOUT A PROTECTIVE COVERING SECURELY PLACED OVER THE ENTIRE AREA AND/OR EROSION CONTROL MEASURES PROPERLY INSTALLED TO PREVENT SEDIMENTS FROM ENTERING THE WATER BODY. ACCEPTABLE PROTECTIVE COVERINGS INCLUDE NATURAL MULCH OF A DEPTH OF TWO INCHES, ROCK RIP-RAP, NONDEGRADABLE MATERIALS SUCH AS PLASTIC OR CANVAS COVERINGS, AND IMPERVIOUS STRUCTURES.
- ANY AREA OF LAND FROM WHICH THE NATURAL VEGETATIVE COVER HAS BEEN EITHER PARTIALLY OR WHOLLY CLEARED OR REMOVED BY DEVELOPMENT ACTIVITIES SHALL BE REVEGETATED WITHIN 10 DAYS FROM THE SUBSTANTIAL COMPLETION OF SUCH CLEARING AND CONSTRUCTION. ACCEPTABLE REVEGETATION SHALL CONSIST OF THE FOLLOWING:
  - RESEEDING WITH AN ANNUAL OR PERENNIAL COVER CROP ACCOMPANIED BY PLACEMENT OF STRAW MULCH OR ITS EQUIVALENT OF SUFFICIENT COVERAGE, BUT NOT LESS THAN 50% OF THE TOTAL DISTURBED AREA, TO CONTROL EROSION UNTIL SUCH TIME AS THE COVER CROP IS ESTABLISHED OVER 90% OF THE SEEDED AREA.
  - REPLANTING WITH NATIVE WOODY AND HERBACEOUS VEGETATION ACCOMPANIED BY PLACEMENT OF STRAW MULCH OR ITS EQUIVALENT OF SUFFICIENT COVERAGE TO CONTROL EROSION UNTIL THE PLANTINGS ARE ESTABLISHED AND ARE CAPABLE OF CONTROLLING EROSION.
  - ANY OTHER RECOGNIZED METHOD WHICH HAS BEEN REVIEWED AND APPROVED BY THE TOWN AS SATISFYING THE INTENT OF THIS REQUIREMENT.
- ANY AREA OF REVEGETATION MUST EXHIBIT SURVIVAL OF A MINIMUM OF 75% OF THE COVER CROP THROUGHOUT THE YEAR IMMEDIATELY FOLLOWING REVEGETATION. REVEGETATION MUST BE REPEATED IN SUCCESSIVE YEARS UNTIL THE MINIMUM SEVENTY-FIVE-PERCENT SURVIVAL FOR ONE YEAR IS ACHIEVED.
- GROUND CLEARING OR GRADING ACTIVITIES WHICH OCCUR DURING THE PERIOD OCTOBER 15 TO APRIL 15, DURING WHICH GERMINATION OF VEGETATION TYPICALLY WILL NOT TAKE PLACE, SHALL BE REQUIRED TO INCORPORATE EXTRA MEASURES DURING REVEGETATION IN ORDER TO REDUCE EROSION AND MAINTAIN WATER QUALITY. THESE EXTRA MEASURES INCLUDE, BUT ARE NOT LIMITED TO, THE USE OF SCREEN MESH, NETTING, EXTRA MULCH, AND SILTATION FENCES.

## DEMOLITION NOTES

- CONTRACTOR SHALL VISIT THE SITE TO OBSERVE ALL EXISTING SITE CONDITIONS PRIOR TO SUBMITTING BID DOCUMENTS.
- PRIOR TO COMMENCING WORK THE CONTRACTOR SHALL VERIFY AND STAKE THE LOCATIONS OF ALL UNDERGROUND UTILITIES. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO UTILIZE A LOCATING SERVICE TO VERIFY UNDERGROUND UTILITY LOCATIONS.
- CONTRACTOR SHALL VERIFY THE FOLLOWING: FIELD MEASUREMENTS, FIELD CONSTRUCTION CRITERIA, CATALOGUE NUMBERS, AND SIMILAR DATA.
- CONTRACTOR SHALL OBTAIN AND COMPLY WITH ALL NECESSARY APPROVALS, PERMITS, INSPECTIONS AND CERTIFICATIONS PRIOR TO AND DURING THE COURSE OF CONSTRUCTION.
- CONTRACTOR IS RESPONSIBLE TO REPAIR OR REPLACE ALL ITEMS DAMAGED OUTSIDE OF CONSTRUCTION LIMITS, OR ANY ITEMS DISTURBED ON THE SITE WHICH ARE NOT PART OF THE IDENTIFIED WORK OF THIS CONTRACT. CONTRACTOR SHALL PROVIDE PROPER SIGNS, BARRICADES, FENCES, TO PROTECT THE WORK, PROPERTY, EQUIPMENT AND PERSONS FROM DAMAGE DURING ALL PHASES OF CONSTRUCTION.
- PROTECT ALL VEGETATION TO REMAIN DURING ALL PHASES OF CONSTRUCTION. DO NOT DRIVE VEHICLES, STORE EQUIPMENT, SPILL LIQUIDS OR STORE CHEMICALS BELOW THE CANOPIES OF EXISTING VEGETATION TO REMAIN. CONTRACTOR IS RESPONSIBLE FOR DAMAGE TO ALL VEGETATION AND ROOTS OUTSIDE THE CONSTRUCTION LIMIT LINE AND WITHIN TREE PROTECTION AREAS
- CONTRACTOR SHALL STRIP, STORE, AND REUSE ALL TOPSOIL FROM AREAS TO BE PAVED OR REGRADED. PROVIDE SEDIMENT CONTROL FENCE AROUND BASE OF TOPSOIL STOCKPILE.
- IN AREAS WHERE PLANT MATERIAL IS PROPOSED ON AREAS OF EXISTING PAVEMENT, EXCAVATE EXISTING SOIL TO A DEPTH OF 30" AND REPLACE WITH APPROVED TOPSOIL, COORDINATE WITH PLANTING PLAN.
- ALL EXISTING MATERIAL TO BE SALVAGED SHALL BE VERIFIED BY THE OWNER'S REPRESENTATIVE AND REMOVED AND STORED BY CONTRACTOR IN A LOCATION COORDINATED WITH OWNER. CONTRACTOR SHALL COMPENSATE OWNER FOR ANY DAMAGE TO SALVAGED MATERIALS THAT OCCURS DURING REMOVAL, STORAGE OR REINSTALLATION.
- ALL EXISTING UTILITIES TO REMAIN, UNLESS OTHERWISE NOTED.
- AT PRE-CONSTRUCTION MEETING, CONTRACTOR TO COORDINATE WITH OWNER ANY PLANT MATERIAL TO BE SAVED AND/OR REPLANTED.
- COORDINATE WITH OWNER FOR LOCATION OF EXCESS CUT MATERIAL PLACEMENT.

## PLANTING/LANDSCAPING NOTES

- ALL PLANTS ARE TO MEET THE MINIMUM STANDARDS OF THE AMERICAN ASSOCIATION OF NURSERYMAN.
- THE CONTRACTOR SHALL TAKE EVERY PRECAUTION TO AVOID DAMAGE TO ANY VEGETATION TO REMAIN.
- THE CONTRACTOR IS RESPONSIBLE FOR LOCATING AND FIELD VERIFYING THE LOCATION OF ALL UTILITIES AND AVOIDING ALL UTILITIES TO REMAIN DURING THE CONSTRUCTION PROCESS.
- PLANTS SHALL BE DELIVERED ONLY WHEN THEY CAN BE INSTALLED IN A REASONABLE TIMEFRAME. ALL PLANTS ARE SUBJECT TO INSPECTION AT DELIVERY BY THE LANDSCAPE ARCHITECT.

- ALL PLANTING BEDS AND AREAS OF GROUND COVER SHALL BE STONE MULCHED TO A DEPTH OF 4".
- PLANTS SHALL BE THE SIZE (HEIGHT, DIAMETER, OR CALIPER) AND TYPE NOTED ON THE PLANTING SCHEDULE.
- THE LOCATION OF ALL PLANTING TO BE VERIFIED BY LANDSCAPE ARCHITECT.
- THE CONTRACTOR SHALL GUARANTEE ALL PLANTED MATERIALS' HEALTH, AS DETERMINED BY THE LANDSCAPE ARCHITECT, FOR A MINIMUM OF ONE (1) YEAR TIME.
- THE CONTRACTOR SHALL MAINTAIN ALL WORK INCLUDING WATERING AND PROTECTION FROM TRAFFIC UNTIL FINAL ACCEPTANCE OF THE PROJECT.
- THE CONTRACTOR IS RESPONSIBLE FOR REPAIR OR REPLACEMENT OF ALL ITEMS DAMAGED OUTSIDE CONSTRUCTION LIMITS OR DISTURBED ON SITE WHICH ARE NOT PART OF THE IDENTIFIED WORK OF THIS CONTRACT.
- ALL PLANTS AND SEED MIXTURES SHALL BE NATIVE SPECIES. NO INVASIVE SPECIES SHALL BE PERMITTED.

## PLANT BED PREPARATION

- IN AREAS WHERE PLANTING IS PROPOSED, AREA SHALL BE EXCAVATED TO A DEPTH OF 3" AND FILLED WITH SUITABLE BACKFILL/TOPSOIL AS DESCRIBED BELOW.
- PROVIDE TOPSOIL WHICH IS FERTILE, FRIABLE, NATURAL LOAM, SURFACE SOIL, FREE OF SUBSOIL, CLAY LUMPS, BRUSH, WEEDS AND OTHER LITTER, AND FREE OF ROOTS, STUMPS, STONES LARGER THAN 2" IN ANY DIMENSION, AND OTHER EXTRANEIOUS OR TOXIC MATTER HARMFUL TO PLANT GROWTH. TOPSOIL SHALL NOT BE DELIVERED TO THE SITE WHILE IN A FROZEN OR MUDDY CONDITION.
- OBTAIN TOPSOIL FROM LOCAL SOURCES. OBTAIN TOPSOIL ONLY FROM NATURALLY, WELL-DRAINED SITES WHERE TOPSOIL OCCURS IN DEPTH OF NOT LESS THAN 4"; DO NOT OBTAIN FROM BOGS OR MARSHES.
- TOPSOIL SHALL HAVE AN ACIDITY RANGE OF PH 5.0 TO 7.0, AND SHALL CONTAIN NOT LESS THAN 5% OR MORE THAN 8% ORGANIC MATTER AS DETERMINED BY LOSS ON IGNITION OF MOISTURE-FREE SAMPLES DRIED AT 100 C. SUFFICIENT LIMESTONE SHALL BE ADDED TO TOPSOIL, IF REQUIRED, TO BRING IT TO A RANGE OF PH 5.0 TO PH 7.0.
- TOPSOIL SHALL MEET THE FOLLOWING MECHANICAL ANALYSIS.

| SIEVE DESIGNATION | % PASSING |
|-------------------|-----------|
| 1" SCREEN         | 100       |
| 1/2 SCREEN        | 97/100    |
| 100 MESH SIEVE    | 60-40     |
- SOIL AMENDMENTS SHALL INCLUDE PEAT HUMUS: FS Q-P-166 DECOMPOSED PEAT WITH NO IDENTIFIABLE FIBERS AND WITH PH RANGE SUITABLE FOR INTENDED USE.
- ADDITIONAL AMENDMENTS TO INCLUDE A COMPLETE FERTILIZER OF NEUTRAL CHARACTER, APPROVED FOR USE ON ORGANIC FARMS, WITH SOME ELEMENTS DERIVED FROM ORGANIC SOURCES AND CONTAINING THE FOLLOWING PERCENTAGES OF AVAILABLE PLANT NUTRIENTS:
  - FOR TREES AND SHRUBS, PROVIDE FERTILIZER WITH NOT LESS THAN 5% TOTAL NITROGEN, 10% AVAILABLE PHOSPHORIC ACID AND 5% SOLUBLE POTASH.
- ALL PLANTING BED AREAS SHALL BE MULCHED TO A DEPTH OF 4".

## SEEDING NOTES:

- DISTURBED AREAS AROUND PROJECT SITE SHALL BE SEEDED WITH THE FOLLOWING MIXTURE AND APPLIED AT A RATE OF NOT LESS THAN 5 LBS /1000 SF. SEE STORMWATER POND DETAILS AND PLANTING PLAN FOR STORMWATER POND AND STEEP SLOPE SEEDING REQUIREMENTS.

| COMMON NAME        | WEIGHT (%) | MINIMUM PURITY (%) | MINIMUM (%) GERMINATION |
|--------------------|------------|--------------------|-------------------------|
| KENTUCKY BLUEGRASS | 65         | 98                 | 85                      |
| RED FESCUE         | 25         | 98                 | 80                      |
| PERENNIAL RYEGRASS | 10         | 98                 | 90                      |

## WINTER WORK EROSION & SEDIMENT CONTROLS:

WINTER WORK EROSION AND SEDIMENT CONTROLS

IF ONGOING CONSTRUCTION ACTIVITY OCCURS BETWEEN NOVEMBER 15 AND APRIL 1, THE CONTRACTOR SHALL IMPLEMENT TEMPORARY SOIL STABILIZATION MEASURES IN AREAS WHERE SOIL DISTURBANCE ACTIVITY HAS TEMPORARILY CEASED. STABILIZATION MEASURES SHALL BE INITIATED BY THE END OF THE NEXT BUSINESS DAY AND COMPLETED WITHIN THREE (3) DAYS. IF STRAW MULCH IS USED ALONE, MULCH SHALL BE APPLIED AT 4 TONS PER ACRE. OTHER MANUFACTURED MULCHES SHALL BE APPLIED AT DOUBLE THE MANUFACTURER'S RECOMMENDED RATE. ROLLED EROSION CONTROL BLANKETS MUST BE USED ON ALL SLOPES 3 HORIZONTAL TO 1 VERTICAL OR STEEPER. THE CONTRACTOR SHALL ALSO IMPLEMENT THE MEASURES INDICATED IN THE NEW YORK STATE STANDARDS AND SPECIFICATION FOR WINTER STABILIZATION, DESIGN CRITERIA 1 THROUGH 7, 10 AND 11.

EROSION AND SEDIMENT CONTROLS FOR WINTER SHUTDOWN

IF THE SITE WILL NOT HAVE EARTH DISTURBING ACTIVITIES BETWEEN NOVEMBER 15 AND APRIL 1, THE CONTRACTOR SHALL IMPLEMENT THE FOLLOWING EROSION CONTROL MEASURES IN ANY AREAS WHERE FINAL/PERMANENT STABILIZATION HAS NOT BEEN COMPLETED:

ALL BARE EXPOSED SOIL RESULTING FROM CONSTRUCTION ACTIVITIES OR A NATURAL EVENT MUST BE STABILIZED BY ESTABLISHED VEGETATION, STRAW OR OTHER ACCEPTABLE MULCH, MATTING, ROCK, OR OTHER APPROVED MATERIAL SUCH AS ROLLED EROSION CONTROL PRODUCTS. IF STRAW BLANKET IS USED IT SHALL MEET THE REQUIREMENTS OF FHWA FP-03 AS A TYPE 2C EROSION CONTROL BLANKET SHALL FOR USE ON SLOPES WITH GRADIENTS NOT EXCEEDING 3:1 (H:V) OR AN EQUIVALENT APPROVED BY THE ENGINEER. WHERE WIND EXPOSURE OR CONCENTRATED RUNOFF MAY OCCUR, MULCH SHALL BE ANCHORED WITH DEGRADABLE STRAW BLANKET MEETING THE REQUIREMENTS OF FHWA FP-03 AS A TYPE 2D EROSION CONTROL BLANKET FOR USE ON SLOPES WITH GRADIENTS NOT EXCEEDING 2:1 (H:V) OR AN EQUIVALENT APPROVED BY THE ENGINEER.

WINTER STABILIZATION INSPECTION/MAINTENANCE

INSPECTIONS SHALL BE CONDUCTED IN ACCORDANCE WITH AND AT THE FREQUENCY SPECIFIED IN THE GENERAL PERMIT FOR CONSTRUCTION, PART IV C.2(C) & (D) TO ENSURE THAT THE EROSION AND SEDIMENT CONTROL PLAN IS PERFORMING ITS WINTER STABILIZATION FUNCTION.

## Planting Plan Greenhouses C-501

PRELIMINARY  
NOT FOR  
CONSTRUCTION

APPLICATION NOTES:

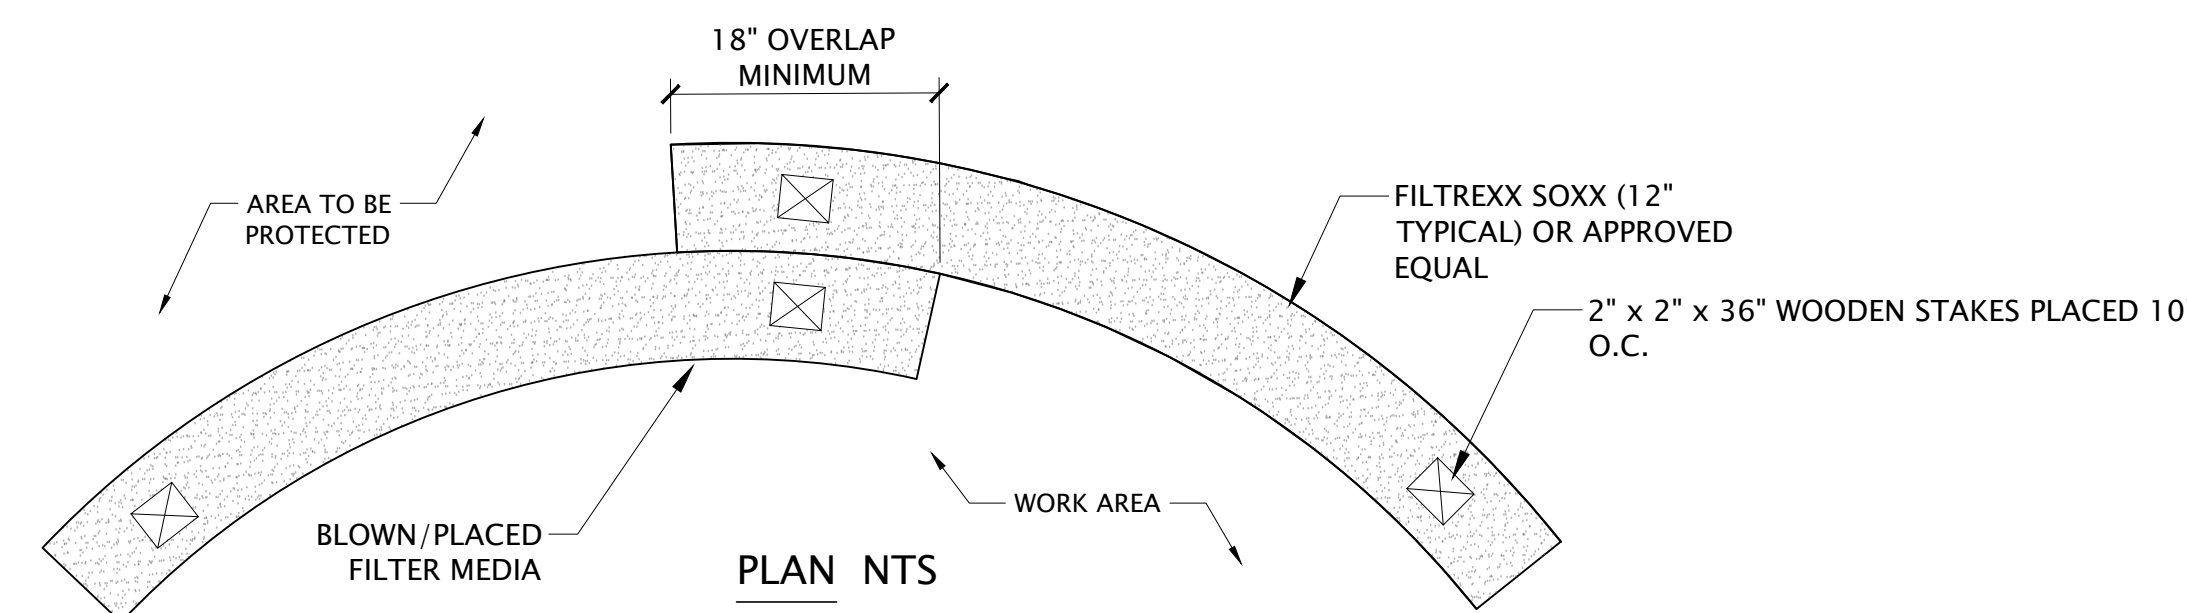

- A. THE PURPOSE OF A STABILIZED CONSTRUCTION ENTRANCE IS TO REDUCE OR ELIMINATE THE TRACKING OF SEDIMENT ONTO PUBLIC RIGHTS OF WAY OR STREETS.
- NOTES:
1. MODIFICATIONS MAY BE REQUIRED TO MATCH FIELD CONDITIONS.
  2. A 30' WASH AREA SHALL BE PROVIDED, ADDITIONAL GRADING MAY BE REQUIRED TO PROVIDE WASHING AREAS.
  3. PROPOSED DRAINAGE PIPES SHALL BE SIZED WITH SUFFICIENT CAPACITY TO CARRY DITCH FLOWS (12" MIN.). ALTERNATIVE WAYS OF TRANSPORTING DITCH DRAINAGE ACROSS CONSTRUCTION ENTRANCES MAY BE PROPOSED BY THE CONTRACTOR FOR APPROVAL BY THE ENGINEER.
  4. THE CONTRACTOR SHALL GRADE TO PREPARE AND SMOOTH ORIGINAL GROUND FOR PLACEMENT OF 6" OF #3 CRUSHED STONE OR GRAVEL ENTRANCE MATERIAL UP TO THE EDGE OF PAVEMENT.
  5. DRAINAGE PIPES OVER 20" DIA. THAT ARE NOT BEHIND ROADSIDE BARRIER SHALL INCLUDE SAFETY END SECTIONS OR GRATING TO ENSURE TRAVERSABILITY.
  6. LAYOUT DRIVEWAY OPENING PER TAPER METHOD OF LAYOUT FOR A MINOR COMMERCIAL DRIVEWAY ON STANDARD SHEET TITLED "DRIVEWAY ENTRANCE LAYOUT".
  7. DETERMINE DRIVEWAY WIDTH "W" FROM THE MINOR COMMERCIAL DRIVEWAY CLASSIFICATION OF TABLE 1 ON STANDARD SHEET TITLED "DRIVEWAY DESIGN GUIDELINES".
  8. PERIODIC MAINTENANCE MAY BE REQUIRED AND COST OF THIS MAINTENANCE WILL BE INCLUDED IN THE UNIT PRICE BID.

SECTION NTS

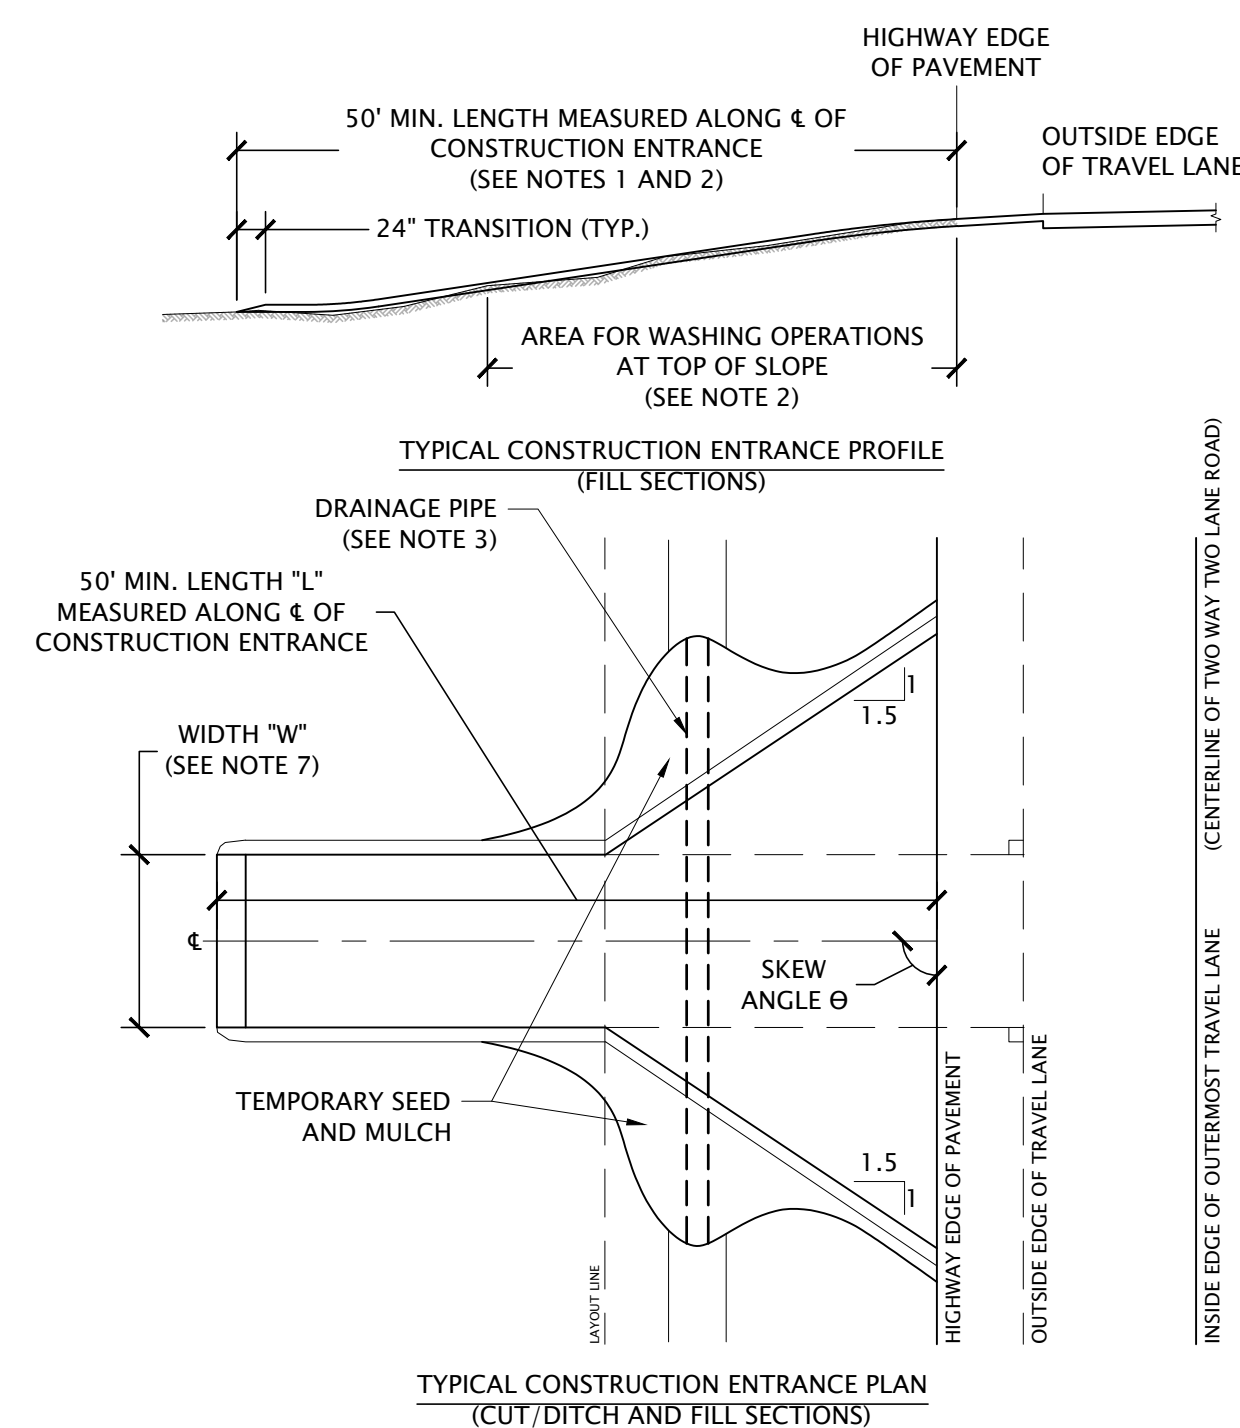

NOTES:

1. ALL MATERIAL TO MEET FILTREXX® SPECIFICATIONS, OR APPROVED EQUAL.
2. FILTER MEDIA FILL TO MEET APPLICATION REQUIREMENTS.
3. COMPOST MATERIAL TO BE DISPERSED ON SITE, AS DETERMINED BY ENGINEER.

2 SILT SOCK  
SCALE: NOT TO SCALE

| TABLE 1 |                                    |
|---------|------------------------------------|
| X       | HIGHWAY SPEED CONDITION            |
| 2       | ALL SPEEDS -- PROTECTED BY BARRIER |
| 3       | < 50 MPH                           |
| 6       | ≥ 50 MPH                           |

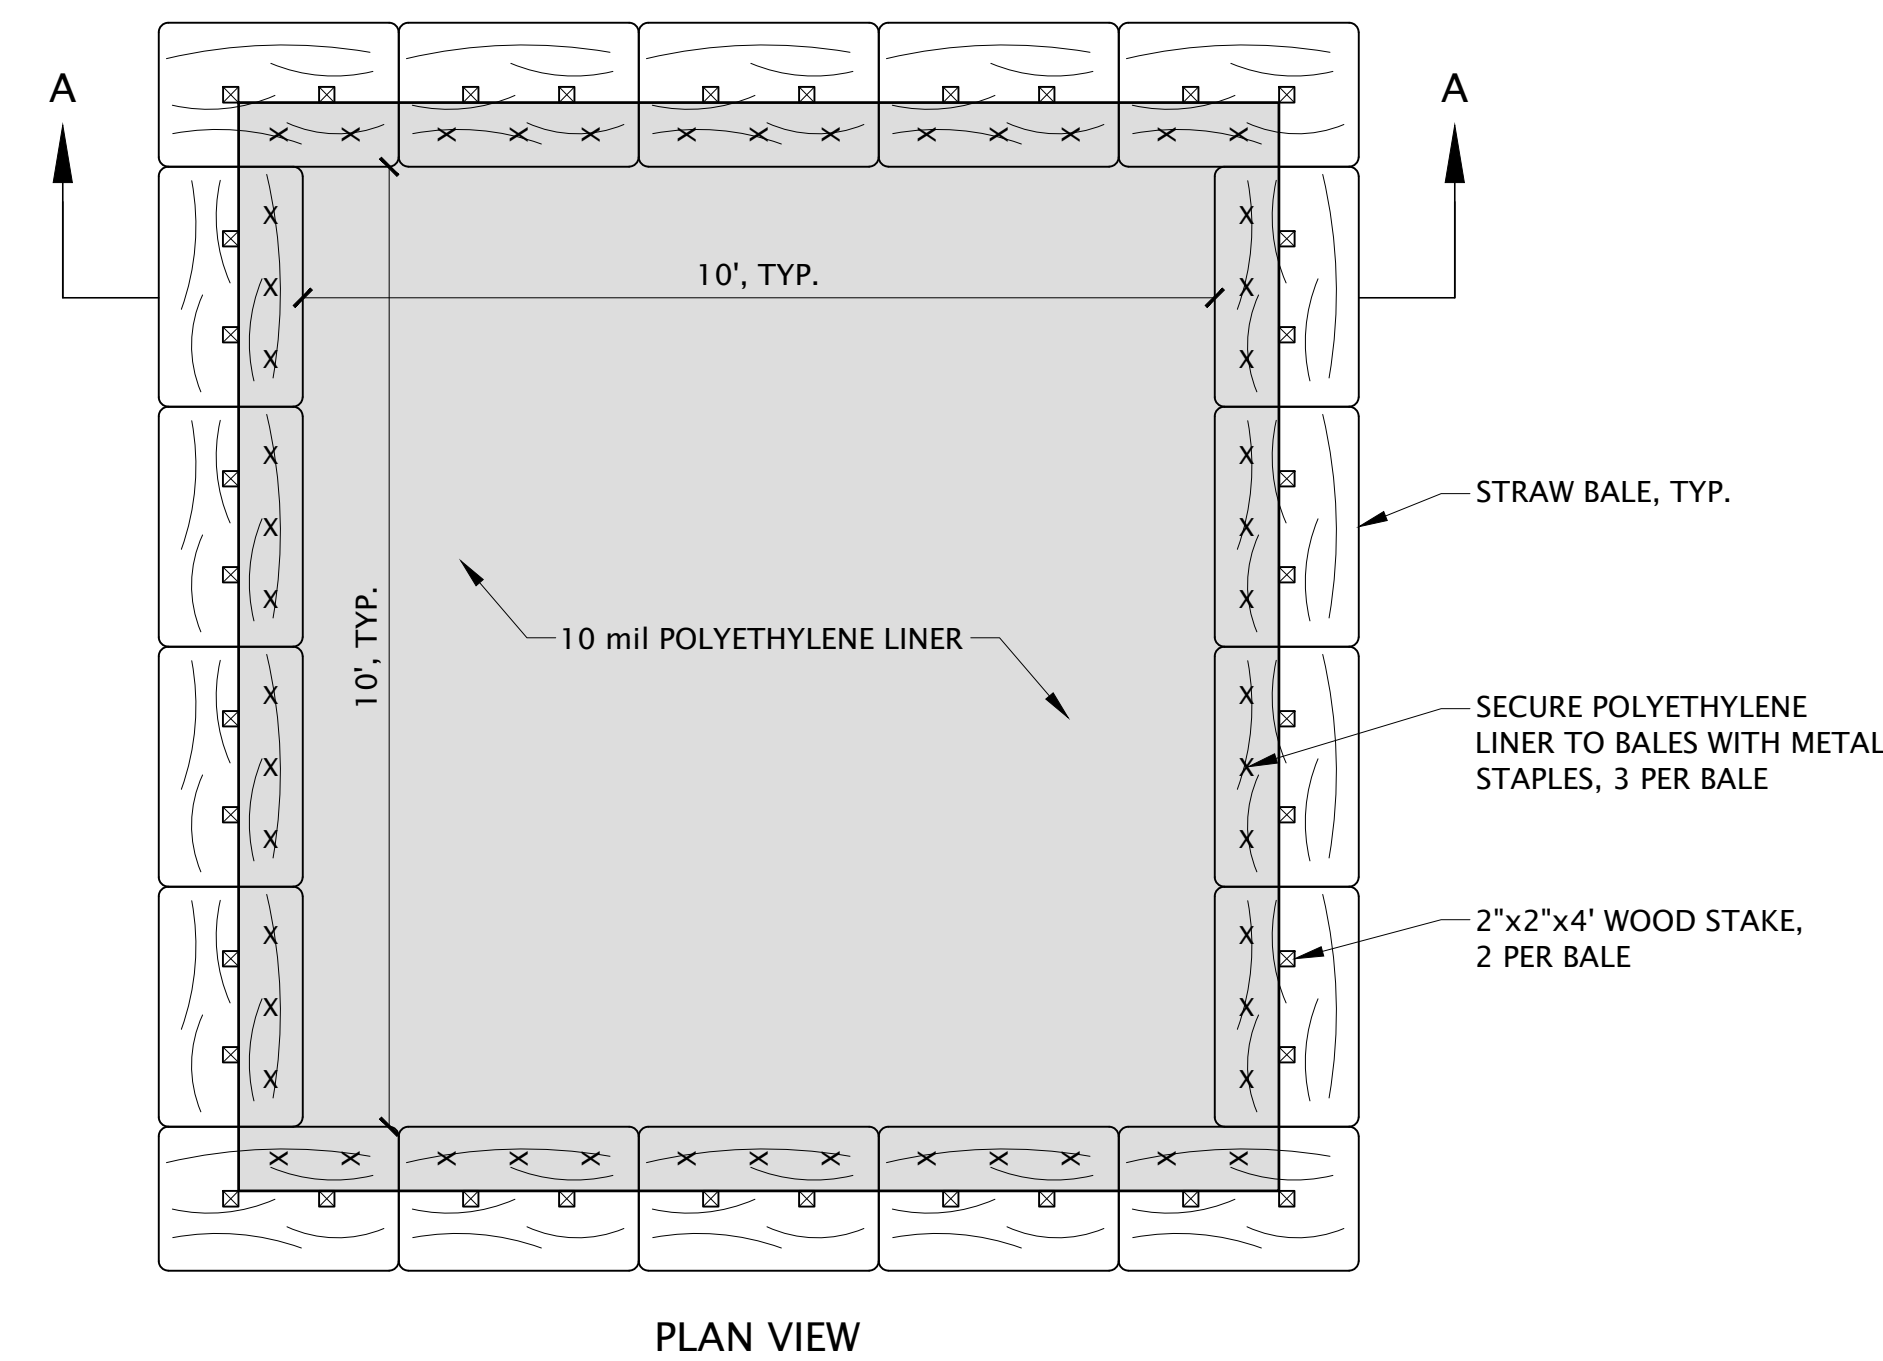

1 STABILIZED CONSTRUCTION ENTRANCE  
SCALE: NOT TO SCALE

NOTES:

1. LOCATE WASHOUT WHERE INDICATED ON PLANS OR IN OTHERWISE SUITABLE LOCATION AT LEAST 50' FROM INLETS, WATERWAYS, WELLS & LEACHFIELDS.
2. INSTALL TO PREVENT GENERAL SITE RUNOFF FROM ENTERING STORAGE AREA.
3. REPLACE POLYETHYLENE LINER IF DAMAGED OR TORN.
4. LIQUIDS SHALL BE ALLOWED TO EVAPORATE OR SHALL BE PUMPED OUT AND DISPOSED OF BY APPROPRIATE WASTE HAULER. DRY SOLIDS SHALL BE COLLECTED AND DISPOSED OF AT AN APPROPRIATE RECYCLING FACILITY.

3 ABOVE GRADE CONCRETE WASHOUT DETAIL

| PARKING LOT                     | 1 1/2"     | 2"            | 8-10"         | <0.3 MILLION |
| STANDARD ROADWAY                | 1 1/2"     | 3"            | 12"           | <30 MILLION  |
| HEAVILY TRAVELED/ TRUCK LOADING | 2"         | *4"           | 12"           | <30 MILLION  |

\* SEE NOTE NO. 2

NOTES:

- PAVEMENT SECTIONS SPECIFIED ARE TYPICAL FOR STREET, DRIVEWAY AND PARKING LOT CONSTRUCTION WHERE TRAFFIC VOLUMES AND LOADINGS ARE NOT EXCESSIVE. BASED ON ANTICIPATED VOLUMES AND LOADS. THE TOWN ENGINEER MAY REQUIRE STRUCTURAL PAVEMENT SECTION TO BE INCREASED TO CARRY DESIGN LOADING.
- BINDER TO BE PLACE IN 2-2" LIFTS W/ TACK COAT BETWEEN.
- THE TOWN MAY REQUIRE COMPACTION TESTING AND/OR CORE SAMPLES TO VERIFY PAVEMENT THICKNESS. ALL TESTING SHALL BE AS ORDERED BY THE TOWN ENGINEER AND SHALL BE PAID FOR BY THE CONTRACTOR.
- NOTIFY THE TOWN ENGINEER 48 HOURS MINIMUM

1 ASPHALT PAVEMENT  
C-701 SCALE: NOT TO SCALE

NOTES

- EXPANSION JOINTS TO OCCUR MAX. 20' O.C. & AT ALL CURBS, WALLS, & WHERE SHOWN ON PLANS AND OTHER DETAILS.
- SCORE JOINTS TO BE 5' O.C. OR AS SHOWN ON PLANS & OTHER DETAILS OR TO MATCH EXISTING CONDITIONS. CONTROL JOINTS SHALL ALSO OCCUR AROUND ENTIRE PERIMETER OF CONCRETE PAVEMENT WHERE NOT DIRECTLY ABUTTING LAWN OR PLANTING BEDS.
- ALL EDGES TO BE FINISHED WITH A 1/4" RADIUS.
- THE CONCRETE USED SHALL BE 4000 PSI PORTLAND CEMENT, AIR-ENTRAINED, CLASS "D" CONCRETE WITH AN AIR CONTENT OF 5%, MIN., TO 7%, MAX., AND A SLUMP OF TWO INCHES, MIN., TO THREE INCHES MAX.

2 4" CONCRETE SIDEWALK  
C-701 SCALE: NOT TO SCALE

NOTE: EXPANSION JOINTS SPACED ALONG CURB 10' O.C. MAX.

DETECTABLE WARNING SURFACE (DWS)  
TRUNCATED DOME DETAILS

NOTES

- DETECTABLE WARNING SURFACES (DWS) SHALL BE PROVIDED AT THE FOLLOWING LOCATIONS ON PEDESTRIAN ACCESS ROUTES:
  - CURB RAMPS AND BLENDED TRANSITIONS AT PEDESTRIAN STREET CROSSINGS.
  - PEDESTRIAN REFUGE ISLANDS WHERE THE LENGTH OF THE PEDESTRIAN ACCESS ROUTE ACROSS THE REFUGE ISLAND IS GREATER THAN OR EQUAL TO 6'.
  - PEDESTRIAN AT-GRADE RAIL CROSSINGS NOT LOCATED WITHIN A STREET OR HIGHWAY.
- DETECTABLE WARNING SURFACES SHALL BE PROVIDED WHERE THE PEDESTRIAN ACCESS ROUTE CROSSES DRIVEWAYS WITH SIGNAL, YIELD OR STOP CONTROL. DETECTABLE WARNING SURFACES SHALL NOT BE PROVIDED AT CROSSINGS OF UNCONTROLLED DRIVEWAYS.
- WITH THE EXCEPTION OF THE "DETECTABLE WARNING SURFACE TRUNCATED DONE DETAILS" DETECTABLE WARNING DOMES ON THIS SHEET ARE NOT DEPICTED TO SCALE.
- DETECTABLE WARNING FIELDS SHALL EXTEND 24" MINIMUM IN THE DIRECTION OF PEDESTRIAN TRAVEL ACROSS THE FULL WIDTH OF THE CURB RAMP OR FLUSH SURFACE, EXCLUDING ANY FLARED SIDES.
- SOME DETECTABLE WARNING PRODUCTS REQUIRE A CONCRETE BORDER FOR PROPER INSTALLATION. BORDERS CANNOT BE INCLUDED AS PART OF THE 24" MINIMUM DIMENSION DESCRIBED IN NOTE 4.
  - WHEN PLACED AT THE BACK OF CURB, DETECTABLE WARNING FIELDS SHOULD BE PLACED AS CLOSE TO THE BACK OF CURB AS PRACTICABLE. BOTH FRONT CORNERS OF THE DETECTABLE WARNING FIELDS SHALL NOT BE LOCATED MORE THAN 2" FROM THE BACK OF CURB. WHERE THE BACK OF THE CURB EDGE IS TOOLED TO PROVIDE A RADIUS, THE BORDER DIMENSION SHALL MEASURED FROM THE INSIDE EDGE OF THE CURB RADIUS. WHERE CURB IS NOT USED, THE EDGE OF PAVEMENT SHALL BE SUBSTITUTED FOR THE BACK OF CURB FOR PLACEMENT OF DETECTABLE WARNINGS.
  - WHEN PLACED ABOVE THE LOWER GRADE BREAK OF A CURB RAMP, DETECTABLE WARNING UNITS SHOULD BE PLACED AS CLOSE TO THE JOINT AS PRACTICABLE. BOTH FRONT CORNERS OF RECTILINEAR DETECTABLE WARNING FIELDS SHALL NOT BE LOCATED MORE THAN 2' FROM THE JOINT.
  - WHEN RADIAL DWS UNITS ARE PLACED AT THE BACK OF CURB, THE FRONT EDGE OF THE DWS FIELD SHOULD BE AS CLOSE AS POSSIBLE TO THE BACK OF CURB, I.E., THE RADIUS OF THE FRONT OF THE DWS FIELD SHOULD MATCH THE RADIUS ALONG THE BACK OF CURB AS CLOSELY AS POSSIBLE. THE OUTSIDE CORNERS OF THE DWS FIELD MUST BE LOCATED NO MORE THAN 2 INCHES FROM THE BACK OF CURB.
- ON SLOPES OF 5% OR GREATER, THE ROWS OF DOMES SHALL BE ALIGNED TO BE PERPENDICULAR OR RADIAL TO THE LOWER GRADE BREAK ON THE RAMP RUN. WHERE DOMES ARE ARRAYED RADIALY, THEY WAY DIFFER IN DIFFER IN DIAMETER AND CENTER-TO-CENTER SPACING WITHIN THE RANGES SPECIFIED ON THIS SHEET. DOME ALIGNMENT THAT IS PERPENDICULAR OR RADIAL TO THE LOWER GRADE BREAK IS NOT REQUIRED ON SLOPES OF LESS THAN 5%.
- THE DETECTABLE WARNING FIELD SHALL BE THE COLOR SPECIFIED IN THE CONTRACT DOCUMENTS OR MEET THE REQUIREMENTS OF THE STANDARD SPECIFICATIONS. DETECTABLE WARNING SURFACES CONTRAST VISUALLY WITH ADJACENT GUTTER, STREET OR HIGHWAY, OR PEDESTRIAN ACCESS ROUTE SURFACE, EITHER LIGHT-ON-DARK OR DARK-ON-LIGHT.

Project No. 420-1096

Date: 2024-12-16

## Greenhouses Phasing Plan PH-1

**CONVENTIONAL SYSTEM NOTES**

- DESIGN, CONSTRUCTION, MATERIAL STANDARDS, MINIMUM SEPARATION DISTANCES, AND INSPECTION REQUIREMENTS SHALL COMPLY WITH THE LATEST EDITION OF THE NEW YORK STATE DEPARTMENT OF HEALTH PUBLICATIONS: RURAL WATER SUPPLY AND NYCRR PART 75A WASTEWATER TREATMENT-INDIVIDUAL HOUSEHOLD SYSTEMS.
- BUILDER SHALL VERIFY GRADE OF SOIL PIPE AT BUILDING PRIOR TO CONSTRUCTION OF SYSTEM.
- ABSORPTION TRENCHES SHALL BE APPROXIMATELY 18"-24" DEEP.
- THE AREA IMMEDIATELY UP-SLOPE OF THE SYSTEM SHALL BE GRADED SO AS TO DIRECT ANY SURFACE RUNOFF AROUND THE SYSTEM.
- NO WELLS, PONDS, WATER COURSES OR NYSDEC WETLANDS EXIST WITHIN 100 FEET OF PROPOSED SEWAGE DISPOSAL SYSTEM.
- NO ROOF, FOOTING, FLOOR, COOLING WATER, BACKWASH DRAINS ETC. SHALL BE CONNECTED TO THE SEPTIC SYSTEM.
- OWNER IS TO BE PROVIDED A COPY OF THE APPROVED PLAN BY THE DESIGN ENGINEER.
- THERE SHALL BE NOT CHANGES ON THESE PLANS WITHOUT PRIOR APPROVAL OF THE ENGINEER.
- PROJECT IN NOT WITHIN WATERSHED DISTRICT.
- PROJECT IS NOT WITHIN 100 YEAR FLOOD PLAIN.
- NO VEHICULAR PARKING OR TRAFFIC SHALL BE ALLOWED ON ANY PORTION OF THE SEPTIC SYSTEM.
- A LICENSED ENGINEER/ARCHITECT SHALL SUPERVISE CONSTRUCTION IN ACCORDANCE WITH THE APPROVED PLAN AND SUPPLEMENTAL DATA.
- THE UDIG NY SHALL BE CONSULTED WITH PRIOR TO ANY EXCAVATION ASSOCIATED WITH APPROVED PORTIONS OF THE PROJECT.
- SYSTEM IS NOT DESIGNED TO ACCOMMODATE WASTEWATER FROM GARBAGE GRINDER OR HOT TUB.

**COVERING**

- PLACE 4 IN. MINIMUM OF GOOD QUALITY TOPSOIL OVER THE ENTIRE SYSTEM AND SEED AND MULCH.

**INSPECTION**

THE ENGINEER SHALL MAKE THE FOLLOWING INSPECTIONS OF THE DESIGNED SYSTEM:

- AFTER PLACEMENT OF PIPING, TANKS PRIOR TO ANY BACKFILL.
- COMPLETION INCLUDING GRADING, PLACEMENT OF TOPSOIL & SEEDING.
- IT IS THE OWNERS RESPONSIBILITY TO CONTACT THE ENGINEER FOR ABOVE NOTED INSPECTIONS. IF WORK COMMENCES WITHOUT THE NOTED INSPECTIONS, THE ENGINEER WILL NOT BE ABLE TO CERTIFY THE SYSTEM AS BUILT PER PLAN AND THE TOWN WILL NOT BE ABLE TO GRANT A CERTIFICATE OF OCCUPANCY (C.O.).

**DESIGN CRITERIA**

- 15 EMPLOYEES AT 15 GALLONS PER DAY EQUALS 225 GALLONS PER DAY FLOW
- EXISTING TERRAIN APPROXIMATELY 3-5 PERCENT SLOPE.
- PERCOLATION RATE: 0-10 MIN/INCH ON-SITE MATERIAL, APPLICATION RATE 0.90 GPD/S.F. ACTUAL PERCOLATION RATE AT 20" DEPTH = 3 MINUTES/INCH SOIL: MEDIUM BROWN SAND, GROUNDWATER ENCOUNTERED @ 60"

**CALCULATIONS:**

1. REQUIRED LATERAL LENGTH:  $(225 \text{ GPD}) / (0.90 \text{ GPD/SF}) (2 \text{ LF}/2\text{SF}) = 125 \text{ LF}$ .  
USE (3) 50' LATERALS = 150 LF.

**SYSTEM STRUCTURES**

- SEPTIC TANK SHALL BE 1250 GAL. DUAL COMPARTMENT SEAMLESS CONCRETE TANK BY GUARDIAN CONCRETE, INC. OR EQUIVALENT.
- DISTRIBUTION BOX TO BE PRECAST CONCRETE BOX AND COVER DB-6 (6) OUTLET BY GUARDIAN CONCRETE, INC. OR EQUIVALENT.

**PIPING**

- STRUCTURE TO SEPTIC TANK SHALL BE 4" SCH 40 PCV WITH TIGHT JOINTS, MINIMUM SLOPE = 1/4 IN. PER FOOT.
- SEPTIC TANK TO DISTRIBUTION BOX SHALL BE 4" SCH 40 PVC WITH TIGHT JOINTS, MINIMUM SLOPE = 1/8 IN. PER FOOT.
- DISTRIBUTION BOX TO LATERALS SHALL BE 4" SDR35 PVC WITH TIGHT JOINTS, MINIMUM SLOPE = 1/8 IN. PER FOOT.
- DISTRIBUTION LATERALS SHALL BE 4" PERFORATED PVC WITH TIGHT JOINTS, SLOPE: 1/32 - 1/16 IN. PER FOOT.

**\*\* MINIMUM SEPARATION DISTANCES \*\***

|  |           |
|--|-----------|

**INSPECTION AND REPORTS FORMS**

# STORMWATER POLLUTION PREVENTION PLAN WEEKLY CONSTRUCTION INSPECTION FORM

Construction Site: Shangri-La Greenhouses and Farmstand

Town of Moreau, Saratoga County, New York

STORMWATER POLLUTION PREVENTION PLAN DATED October 2024

Per conditions of the New York State Department of Environmental Conservation SPDES General Permit for Stormwater Discharges from Construction Activity Permit No. GP-0-20-001 inspections and reports must be completed once every seven (7) calendar days.

Inspection Type:       Standard  
                                  Supplemental (per request of Owner/Contractor)

Date: \_\_\_\_\_ Week Ending: \_\_\_\_\_

Weather/Storm Event Information: \_\_\_\_\_

Storm Start Time: \_\_\_\_\_ Storm Duration: \_\_\_\_\_

Approximate Amount of Rainfall (inches): \_\_\_\_\_

Based on the results of the inspection, necessary control modifications shall be implemented within seven (7) calendar days. These reports shall be kept on file as part of the Storm Water Pollution Prevention Plan for at least five (5) years from the date of completion and submission of the Final Stabilization Certification/Termination Checklist and Notice of Termination. A copy of the SWPPP shall be kept at the site at all times during construction.

Certification Statement:

*"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering information, the information submitted is, to the best of my knowledge and belief; true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Name of Inspector: \_\_\_\_\_ Title of Inspector: \_\_\_\_\_

Qualifications of Inspector: \_\_\_\_\_

Inspector's Signature: \_\_\_\_\_

Compliance Certification

*"I certify that, based on no incidents of non-compliance identified during the inspection, the site is in compliance with the SWPPP and the Construction General Permit."*

Name of Duly Authorized Representative (Printed): \_\_\_\_\_

Signature of Duly Authorized Representative: \_\_\_\_\_

Date: \_\_\_\_\_

\*Note: Only to be signed when the site is in **full compliance** with the SWPPP and the Construction General Permit.

# CONSTRUCTION DURATION INSPECTIONS

**Directions: Inspection Forms will be filled out during the entire construction phase of the project.**

Required Elements:

1. On a site map, indicate the extent of all disturbed site areas and drainage pathways. Indicate site areas that are expected to undergo initial disturbance or significant site work within the next 14-day period;
2. Indicate on a site map all areas of the site that have undergone temporary or permanent stabilization;
3. Indicate all disturbed site areas that have not undergone active site work during the previous 14-day period;
4. Inspect all sediment control practices and record the approximate degree of sediment accumulation as a percentage of sediment storage volume (for example, 10 percent, 20 percent, 50 percent);
5. Inspect all erosion and sediment control practices and record all maintenance requirements such as verifying the integrity of barrier or diversion systems (earthen berms or silt fencing) and containment systems (sediment basins and sediment traps). Identify any evidence of rill or gully erosion occurring on slopes and any loss of stabilizing vegetation or seeding/mulching. Document any excessive deposition of sediment or ponding water along barrier or diversion systems. Record the depth of sediment within containment structures, any erosion near outlet and overflow structures, and verify the ability of rock filters around perforated riser pipes to pass water; and
6. Immediately report to the Operator any deficiencies that are identified with the implementation of the SWPPP.

# CONSTRUCTION DURATION INSPECTIONS

## Maintaining Water Quality

Yes No N/A

- Is there an increase in turbidity causing a substantial visible contrast to natural conditions?
- Is there residue from oil and floating substances, visible oil film, or globules or grease?
- All disturbances are within the limits of the approved plans.
- Have receiving water bodies been impacted by silt from project?

## Housekeeping

### 1. General Site Conditions

Yes No N/A

- Is construction site litter and debris appropriately managed?
- Are the facilities and equipment necessary for the implementation of erosion and sediment control in working order and/or properly maintained?
- Is construction impacting the adjacent property?
- Is dust adequately controlled?

### 2. Temporary Stream Crossing

Yes No N/A

- Maximum diameter pipes necessary to span creek without dredging are installed.
- Is non-woven geo-textile fabric installed beneath approaches?
- Is composed of aggregate (no earth or soil)?
- Rock on approaches is clean enough to remove mud from vehicles & prevent sediment from entering stream during high flow.

## Runoff Control Practices

### 1. Excavation Dewatering

Yes No N/A

- Upstream and downstream berms (sandbags, inflatable dams, etc.) are installed per plan.
- Clean water upstream pool is being pumped to the downstream pool.
- Sediment laden water from work area is being discharged to a silt-trapping device.
- Constructed upstream berm with one-foot minimum freeboard.

### 2. Level Spreader

Yes No N/A

- Are they installed per plan?
- Constructed on undisturbed soil, not on fill, receiving only clear, non-sediment laden flow.
- Does flow sheet out of level spreaders without erosion on downstream edge?

### 3. Interceptor Dikes and Swales

Yes No N/A

- Installed per plan with minimum side slopes or flatter.
- Stabilized by geo-textile fabric, seed, or mulch with no erosion occurring.
- Sediment-laden runoff directed to sediment trapping structure

# CONSTRUCTION DURATION INSPECTIONS

## Runoff Control Practices (continued)

### 4. Stone Check Dam

Yes No N/A

- Is channel stable? (The flow is not eroding soil underneath or around the structure.)
- Check dam is in good condition (rocks in place and no permanent pools behind the structure).
- Has accumulated sediment been removed?

### 5. Rock Outlet Protection

Yes No N/A

- Installed per plan
- Installed concurrently with pipe installation.

## Soil Stabilization

### 1. Topsoil and Spoil Stockpiles

Yes No N/A

- Stockpiles are stabilized with vegetation and/or mulch.
- Sediment control is installed at the toe of the slope.

### 2. Re-vegetation

Yes No N/A

- Temporary seeding and mulch have been applied to idle areas.
- Four inches, minimum, of topsoil has been applied under permanent seeding.

## Sediment Control

### 1. Stabilized Construction Entrance

Yes No N/A

- Is Stone is clean enough to effectively remove mud from vehicles?
- Is the entrance installed per standards and specifications?
- Does all traffic use the stabilized entrance to enter and leave site?
- Is adequate drainage provided to prevent pending at entrance?

### 2. Silt Fence

Yes No N/A

- Installed on Contour, ten (10) feet from toe of slope (not across conveyance channels)
- Joints constructed by wrapping the two ends together for continuous support
- Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is \_\_\_% of design capacity.

# CONSTRUCTION DURATION INSPECTIONS

## Sediment Control (continued)

### 3. Storm Drain Inlet Protection (Use for Stone and Block, Filter Fabric, Curb, or Excavated practices)

Yes No N/A

- Installed concrete blocks lengthwise so open ends face outward, not upward.
- Placed wire screen between No. 3 crushed stone and concrete blocks.
- Drainage area is one (1) acre or less.
- Excavated area is 900 cubic feet.
- Excavated side slopes should be 2:1.
- 2" x 4" frame is constructed and structurally sound.
- Is there a three (3) foot maximum spacing between posts?
- Fabric is embedded 1 to 1.5 feet below ground and secured to frame/posts with staples at max 8-inch spacing.
- Posts are stable, fabric is tight and without rips or frayed areas.

Sediment accumulation is \_\_\_% of design capacity.

### 4. Temporary Sediment Trap

Yes No N/A

- Outlet structure is constructed per the approved plan or drawing.
- Geo-textile fabric has been placed beneath rock fill.

Sediment accumulation is \_\_\_% of design capacity.

### 5. Temporary Sediment Basin

Yes No N/A

- Basin and outlet structure constructed per the approved plan.
- Basin side slopes are stabilized with seed/mulch.
- Drainage structure flushed and basin surface restored upon removal of sediment basin facility.

Sediment accumulation is \_\_\_% of design capacity.

Note: Not all erosion and sediment control practices are included in this listing. Add additional pages to this list as required by site specific design.

Construction inspection checklists for post-development stormwater management practices can be found in Appendix F of the New York Stormwater Management Design Manual.

## Vegetated Swale Operation, Maintenance, and Management Inspection Checklist

Project:  
 Location:  
 Site Status:  
 Date:  
 Time:  
 Inspector:

\*Inspections should also be conducted after major storm events post construction if stormwater structures show any signs of damage.

| Maintenance Item                                    | Satisfactory/Unsatisfactory | Comments |
|---|-----------------------------|----------|
| <b>1. Debris Cleanout (Monthly)</b>                 |                             |          |
| Contributing areas clean of debris                  |                             |          |
| <b>2. Check Dams or Energy Dissipators (Annual)</b> |                             |          |
| No evidence of flow going around structures         |                             |          |
| No evidence of erosion at downstream toe            |                             |          |
| Soil permeability                                   |                             |          |
| Groundwater/bedrock                                 |                             |          |
| <b>3. Vegetation (Monthly)</b>                      |                             |          |
| Mowing done when needed                             |                             |          |
| Minimum mowing depth not exceeded                   |                             |          |
| No evidence of erosion                              |                             |          |
| Fertilized per specification                        |                             |          |
| <b>4. Dewatering (Monthly)</b>                      |                             |          |
| Dewaterers between storms                           |                             |          |

| Maintenance Item                       | Satisfactory/Unsatisfactory | Comments |
|--|-----------------------------|----------|
| <b>5. Sediment deposition (Annual)</b> |                             |          |
| Clean of sediment                      |                             |          |
| <b>6. Outlet/Inlets (Annual)</b>       |                             |          |
| Good condition, no need for repairs    |                             |          |
| No evidence of erosion                 |                             |          |

**Summary for Pond 2ST: Existing Sediment Trap**

Inflow Area = 5.314 ac, 7.88% Impervious, Inflow Depth = 0.66" for 10-yr event  
 Inflow = 4.96 cfs @ 12.03 hrs, Volume= 0.291 af  
 Outflow = 0.62 cfs @ 12.54 hrs, Volume= 0.145 af, Atten= 87%, Lag= 30.8 min  
 Primary = 0.62 cfs @ 12.54 hrs, Volume= 0.145 af  
 Routed to Link AP1 : Analysis Point 1

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Starting Elev= 307.50' Surf.Area= 0.026 ac Storage= 0.011 af  
 Peak Elev= 310.25' @ 12.54 hrs Surf.Area= 0.094 ac Storage= 0.165 af (0.153 af above start)

Plug-Flow detention time= 294.2 min calculated for 0.134 af (46% of inflow)  
 Center-of-Mass det. time= 143.8 min ( 987.7 - 843.8 )

**Summary for Pond 1ST: Existing Sediment Trap**

Inflow Area = 3.413 ac, 8.82% Impervious, Inflow Depth = 0.88" for 25-yr event  
 Inflow = 3.93 cfs @ 12.04 hrs, Volume= 0.250 af  
 Outflow = 0.20 cfs @ 15.14 hrs, Volume= 0.110 af, Atten= 95%, Lag= 186.2 min  
 Primary = 0.20 cfs @ 15.14 hrs, Volume= 0.110 af  
 Routed to Reach 1R : Existing Swale

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Starting Elev= 315.50' Surf.Area= 0.128 ac Storage= 0.193 af  
 Peak Elev= 316.55' @ 15.14 hrs Surf.Area= 0.167 ac Storage= 0.341 af (0.149 af above start)

Plug-Flow detention time= (not calculated: initial storage exceeds outflow)  
 Center-of-Mass det. time= 227.6 min ( 1,122.5 - 894.9 )

**Summary for Pond 3ST: Existing Sediment Trap**

Inflow Area = 9.901 ac, 9.99% Impervious, Inflow Depth = 0.02" for 1-yr event  
 Inflow = 0.03 cfs @ 18.49 hrs, Volume= 0.019 af  
 Outflow = 0.02 cfs @ 24.10 hrs, Volume= 0.009 af, Atten= 5%, Lag= 336.7 min  
 Primary = 0.02 cfs @ 24.10 hrs, Volume= 0.009 af  
 Routed to Pond 4ST : Existing Sediment Trap

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Starting Elev= 337.42' Surf.Area= 0.130 ac Storage= 0.177 af  
 Peak Elev= 337.51' @ 24.10 hrs Surf.Area= 0.135 ac Storage= 0.188 af (0.012 af above start)

Plug-Flow detention time= (not calculated: initial storage exceeds outflow)  
 Center-of-Mass det. time= 213.7 min ( 1,391.5 - 1,177.8 )

**Summary for Pond 4ST: Existing Sediment Trap**

Inflow Area = 11.660 ac, 8.84% Impervious, Inflow Depth = 0.66" for 10-yr event  
 Inflow = 6.34 cfs @ 12.02 hrs, Volume= 0.641 af  
 Outflow = 5.52 cfs @ 12.07 hrs, Volume= 0.596 af, Atten= 13%, Lag= 3.2 min  
 Primary = 5.52 cfs @ 12.07 hrs, Volume= 0.596 af  
 Routed to Link AP3 : Analysis Point 3

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Peak Elev= 335.98' @ 12.07 hrs Surf.Area= 0.118 ac Storage= 0.085 af

Plug-Flow detention time= 67.6 min calculated for 0.596 af (93% of inflow)  
 Center-of-Mass det. time= 29.4 min ( 921.5 - 892.1 )

| Volume | Invert  | Avail.Storage | Storage Description  |

**Summary for Pond 5ST: Existing Sediment Trap**

Inflow Area = 4.455 ac, 0.00% Impervious, Inflow Depth = 0.59" for 10-yr event  
 Inflow = 1.94 cfs @ 12.20 hrs, Volume= 0.217 af  
 Outflow = 1.78 cfs @ 12.27 hrs, Volume= 0.217 af, Atten= 8%, Lag= 4.1 min  
 Discarded = 1.78 cfs @ 12.27 hrs, Volume= 0.217 af  
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af  
 Routed to Link AP4 : Analysis Point 4

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Peak Elev= 327.85' @ 12.27 hrs Surf.Area= 0.018 ac Storage= 0.007 af

Plug-Flow detention time= 1.0 min calculated for 0.217 af (100% of inflow)  
 Center-of-Mass det. time= 1.0 min ( 920.5 - 919.5 )

**Summary for Pond 3ST: Existing Sediment Trap**

Inflow Area = 9.901 ac, 9.99% Impervious, Inflow Depth = 0.67" for 25-yr event  
 Inflow = 3.20 cfs @ 12.43 hrs, Volume= 0.550 af  
 Outflow = 2.94 cfs @ 12.56 hrs, Volume= 0.539 af, Atten= 8%, Lag= 7.8 min  
 Primary = 2.94 cfs @ 12.56 hrs, Volume= 0.539 af  
 Routed to Pond 4ST : Existing Sediment Trap

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Starting Elev= 337.42' Surf.Area= 0.130 ac Storage= 0.177 af  
 Peak Elev= 337.75' @ 12.56 hrs Surf.Area= 0.148 ac Storage= 0.222 af (0.046 af above start)

Plug-Flow detention time= 247.1 min calculated for 0.363 af (66% of inflow)  
 Center-of-Mass det. time= 18.6 min ( 957.6 - 939.1 )

**Summary for Pond 5ST: Existing Sediment Trap**

Inflow Area = 4.455 ac, 0.00% Impervious, Inflow Depth = 0.99" for 25-yr event  
 Inflow = 3.87 cfs @ 12.18 hrs, Volume= 0.369 af  
 Outflow = 3.24 cfs @ 12.29 hrs, Volume= 0.369 af, Atten= 16%, Lag= 6.3 min  
 Discarded = 3.24 cfs @ 12.29 hrs, Volume= 0.369 af  
 Primary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af  
 Routed to Link AP4 : Analysis Point 4

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Peak Elev= 328.44' @ 12.29 hrs Surf.Area= 0.032 ac Storage= 0.022 af

Plug-Flow detention time= 1.9 min calculated for 0.369 af (100% of inflow)  
 Center-of-Mass det. time= 1.9 min ( 900.1 - 898.2 )

**Summary for Pond 4ST: Existing Sediment Trap**

[93] Warning: Storage range exceeded by 0.36'

[90] Warning: Qout>Qin may require smaller dt or Finer Routing

[87] Warning: Oscillations may require smaller dt or Finer Routing (severity=1)

Inflow Area = 11.660 ac, 8.84% Impervious, Inflow Depth = 1.99" for 100-yr event  
 Inflow = 12.10 cfs @ 12.02 hrs, Volume= 1.936 af  
 Outflow = 12.22 cfs @ 12.03 hrs, Volume= 1.891 af, Atten= 0%, Lag= 0.7 min  
 Primary = 12.22 cfs @ 12.03 hrs, Volume= 1.891 af  
 Routed to Link AP3 : Analysis Point 3

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Peak Elev= 336.36' @ 12.03 hrs Surf.Area= 0.119 ac Storage= 0.087 af

Plug-Flow detention time= 29.0 min calculated for 1.890 af (98% of inflow)  
 Center-of-Mass det. time= 15.4 min ( 887.3 - 871.9 )

### Summary for Link AP6: Analysis Point 6

Inflow Area = 6.099 ac, 0.00% Impervious, Inflow Depth = 2.90" for 100-yr event  
Inflow = 14.93 cfs @ 12.26 hrs, Volume= 1.475 af  
Primary = 14.93 cfs @ 12.26 hrs, Volume= 1.475 af, Atten= 0%, Lag= 0.0 min

Primary outflow = Inflow, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs

### Link AP6: Analysis Point 6

Hydrograph

**Hydrograph for Link AP6: Analysis Point 6**

| Time (hours) | Inflow (cfs) | Elevation (feet) | Primary (cfs) | Time (hours) | Inflow (cfs) | Elevation (feet) | Primary (cfs) |

### Summary for Reach 3R: Proposed RRv Swale

[62] Hint: Exceeded Reach 4R OUTLET depth by 0.29' @ 12.00 hrs

Inflow Area = 0.744 ac, 40.73% Impervious, Inflow Depth = 1.07" for 1-yr event  
Inflow = 1.29 cfs @ 11.98 hrs, Volume= 0.066 af  
Outflow = 1.23 cfs @ 12.01 hrs, Volume= 0.066 af, Atten= 5%, Lag= 1.5 min  
Routed to Pond 3P : Proposed Stormwater Pond

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
Max. Velocity= 0.76 fps, Min. Travel Time= 2.3 min  
Avg. Velocity = 0.20 fps, Avg. Travel Time= 8.5 min

Peak Storage= 168 cf @ 12.01 hrs  
Average Depth at Peak Storage= 0.47' , Surface Width= 4.84'  
Bank-Full Depth= 1.20' Flow Area= 6.7 sf, Capacity= 8.50 cfs

2.00' x 1.20' deep channel, n= 0.100 Earth, dense brush, high stage  
Side Slope Z-value= 3.0 '/' Top Width= 9.20'  
Length= 104.0' Slope= 0.0116 '/'  
Inlet Invert= 312.21', Outlet Invert= 311.00'

### Summary for Reach 4R: Proposed 10" Culvert

[52] Hint: Inlet/Outlet conditions not evaluated

[62] Hint: Exceeded Reach 5R OUTLET depth by 0.04' @ 12.05 hrs

Inflow Area = 0.238 ac, 26.47% Impervious, Inflow Depth = 0.86" for 1-yr event  
Inflow = 0.31 cfs @ 12.03 hrs, Volume= 0.017 af  
Outflow = 0.31 cfs @ 12.03 hrs, Volume= 0.017 af, Atten= 0%, Lag= 0.1 min  
Routed to Reach 3R : Proposed RRv Swale

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
Max. Velocity= 3.42 fps, Min. Travel Time= 0.2 min  
Avg. Velocity= 1.13 fps, Avg. Travel Time= 0.5 min

Peak Storage= 3 cf @ 12.03 hrs  
Average Depth at Peak Storage= 0.19' , Surface Width= 0.70'  
Bank-Full Depth= 0.83' Flow Area= 0.5 sf, Capacity= 2.85 cfs

10.0" Round Pipe  
n= 0.010 PVC, smooth interior  
Length= 33.0' Slope= 0.0100 '/  
Inlet Invert= 312.54', Outlet Invert= 312.21'

**Summary for Reach 5R: Proposed RRv Swale**

Inflow Area = 0.238 ac, 26.47% Impervious, Inflow Depth = 0.86" for 1-yr event  
 Inflow = 0.34 cfs @ 12.00 hrs, Volume= 0.017 af  
 Outflow = 0.31 cfs @ 12.03 hrs, Volume= 0.017 af, Atten= 7%, Lag= 1.8 min  
 Routed to Reach 4R : Proposed 10" Culvert

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Max. Velocity= 0.84 fps, Min. Travel Time= 2.7 min  
 Avg. Velocity = 0.23 fps, Avg. Travel Time= 10.0 min

Peak Storage= 51 cf @ 12.03 hrs  
 Average Depth at Peak Storage= 0.15' , Surface Width= 2.91'  
 Bank-Full Depth= 0.75' Flow Area= 3.2 sf, Capacity= 6.51 cfs

2.00' x 0.75' deep channel, n= 0.080 Earth, long dense weeds  
 Side Slope Z-value= 3.0 '/ Top Width= 6.50'  
 Length= 136.0' Slope= 0.0328 '/  
 Inlet Invert= 317.00', Outlet Invert= 312.54'

### Summary for Reach 6R: 12" Culvert Pond Discharge

[52] Hint: Inlet/Outlet conditions not evaluated

Inflow Area = 1.574 ac, 29.03% Impervious, Inflow Depth > 0.93" for 1-yr event  
Inflow = 0.10 cfs @ 14.03 hrs, Volume= 0.122 af  
Outflow = 0.10 cfs @ 14.03 hrs, Volume= 0.122 af, Atten= 0%, Lag= 0.1 min  
Routed to Pond 2ST : Existing Sediment Trap

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
Max. Velocity= 1.94 fps, Min. Travel Time= 0.2 min  
Avg. Velocity = 0.96 fps, Avg. Travel Time= 0.4 min

Peak Storage= 1 cf @ 14.03 hrs  
Average Depth at Peak Storage= 0.12' , Surface Width= 0.64'  
Bank-Full Depth= 1.00' Flow Area= 0.8 sf, Capacity= 3.44 cfs

12.0" Round Pipe  
n= 0.012 Corrugated PP, smooth interior  
Length= 22.6' Slope= 0.0080 '/'  
Inlet Invert= 309.83', Outlet Invert= 309.65'

**Summary for Pond 3P: Proposed Stormwater Pond**

[61] Hint: Exceeded Reach 3R outlet invert by 0.02' @ 14.05 hrs

Inflow Area = 1.574 ac, 29.03% Impervious, Inflow Depth = 0.93" for 1-yr event  
 Inflow = 2.04 cfs @ 12.02 hrs, Volume= 0.122 af  
 Outflow = 0.10 cfs @ 14.03 hrs, Volume= 0.122 af, Atten= 95%, Lag= 120.6 min  
 Primary = 0.10 cfs @ 14.03 hrs, Volume= 0.122 af  
 Routed to Reach 6R : 12" Culvert Pond Discharge  
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af  
 Routed to Pond 2ST : Existing Sediment Trap

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Starting Elev= 309.83' Surf.Area= 1,843 sf Storage= 1,307 cf  
 Peak Elev= 311.02' @ 14.03 hrs Surf.Area= 3,385 sf Storage= 4,468 cf (3,161 cf above start)

Plug-Flow detention time= 1,495.3 min calculated for 0.092 af (75% of inflow)  
 Center-of-Mass det. time= 1,059.6 min ( 1,912.7 - 853.2 )

**Summary for Reach 1R: Existing Swale**

Inflow Area = 3.372 ac, 8.66% Impervious, Inflow Depth = 0.09" for 10-yr event  
 Inflow = 0.55 cfs @ 11.97 hrs, Volume= 0.026 af  
 Outflow = 0.52 cfs @ 12.00 hrs, Volume= 0.026 af, Atten= 4%, Lag= 1.5 min  
 Routed to Pond 2ST : Existing Sediment Trap

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Max. Velocity= 1.65 fps, Min. Travel Time= 2.5 min  
 Avg. Velocity = 0.43 fps, Avg. Travel Time= 9.4 min

Peak Storage= 77 cf @ 12.00 hrs  
 Average Depth at Peak Storage= 0.13' , Surface Width= 2.79'  
 Bank-Full Depth= 1.00' Flow Area= 5.0 sf, Capacity= 25.24 cfs

2.00' x 1.00' deep channel, n= 0.030 Earth, grassed & winding  
 Side Slope Z-value= 3.0 ' / ' Top Width= 8.00'  
 Length= 244.0' Slope= 0.0205 ' / '  
 Inlet Invert= 316.00', Outlet Invert= 311.00'

### Summary for Reach 3R: Proposed RRv Swale

[63] Warning: Exceeded Reach 4R INLET depth by 0.08' @ 12.00 hrs

Inflow Area = 0.744 ac, 40.73% Impervious, Inflow Depth = 2.33" for 10-yr event  
Inflow = 2.80 cfs @ 11.98 hrs, Volume= 0.145 af  
Outflow = 2.70 cfs @ 12.00 hrs, Volume= 0.145 af, Atten= 3%, Lag= 1.2 min  
Routed to Pond 3P : Proposed Stormwater Pond

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
Max. Velocity= 0.94 fps, Min. Travel Time= 1.8 min  
Avg. Velocity = 0.25 fps, Avg. Travel Time= 7.0 min

Peak Storage= 300 cf @ 12.00 hrs  
Average Depth at Peak Storage= 0.70' , Surface Width= 6.21'  
Bank-Full Depth= 1.20' Flow Area= 6.7 sf, Capacity= 8.50 cfs

2.00' x 1.20' deep channel, n= 0.100 Earth, dense brush, high stage  
Side Slope Z-value= 3.0 '/' Top Width= 9.20'  
Length= 104.0' Slope= 0.0116 '/'  
Inlet Invert= 312.21', Outlet Invert= 311.00'

### Summary for Reach 4R: Proposed 10" Culvert

[52] Hint: Inlet/Outlet conditions not evaluated

[62] Hint: Exceeded Reach 5R OUTLET depth by 0.05' @ 12.05 hrs

Inflow Area = 0.238 ac, 26.47% Impervious, Inflow Depth = 2.05" for 10-yr event  
Inflow = 0.76 cfs @ 12.02 hrs, Volume= 0.041 af  
Outflow = 0.76 cfs @ 12.02 hrs, Volume= 0.041 af, Atten= 0%, Lag= 0.1 min  
Routed to Reach 3R : Proposed RRv Swale

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
Max. Velocity= 4.40 fps, Min. Travel Time= 0.1 min  
Avg. Velocity= 1.35 fps, Avg. Travel Time= 0.4 min

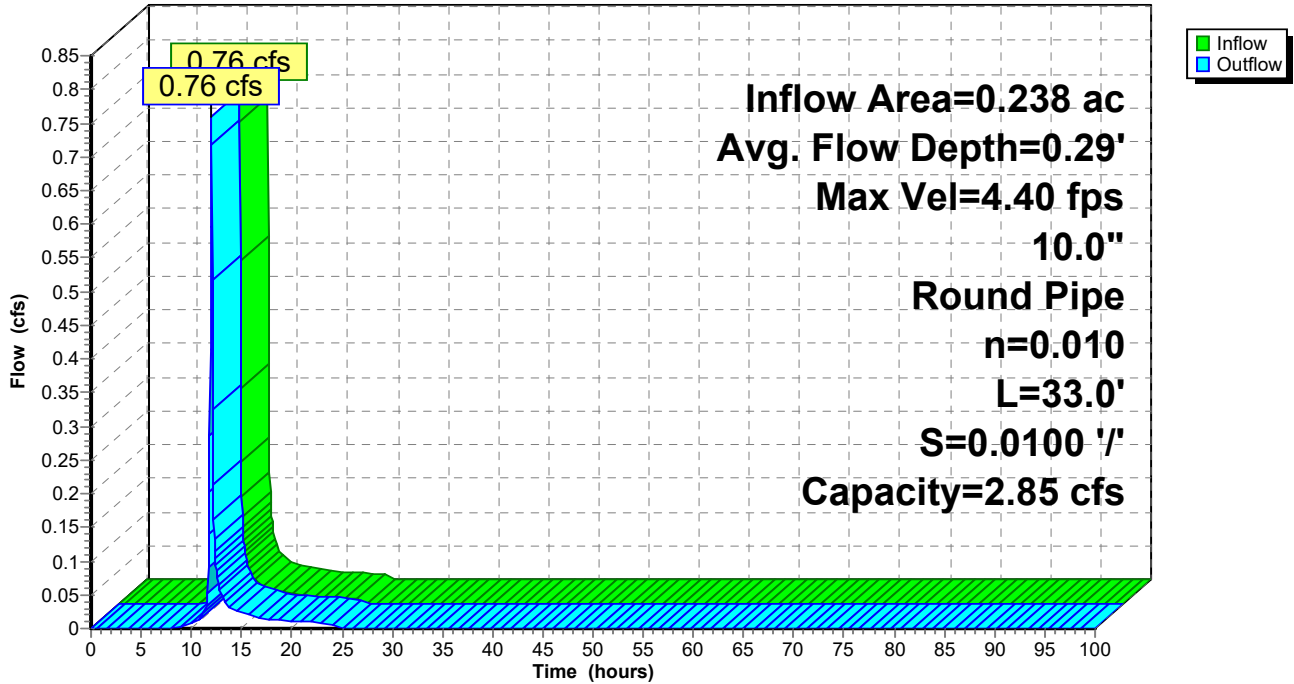

Peak Storage= 6 cf @ 12.02 hrs  
Average Depth at Peak Storage= 0.29' , Surface Width= 0.80'  
Bank-Full Depth= 0.83' Flow Area= 0.5 sf, Capacity= 2.85 cfs

10.0" Round Pipe  
n= 0.010 PVC, smooth interior  
Length= 33.0' Slope= 0.0100 '/'  
Inlet Invert= 312.54', Outlet Invert= 312.21'

**Summary for Reach 5R: Proposed RRv Swale**

Inflow Area = 0.238 ac, 26.47% Impervious, Inflow Depth = 2.05" for 10-yr event  
 Inflow = 0.80 cfs @ 11.99 hrs, Volume= 0.041 af  
 Outflow = 0.76 cfs @ 12.02 hrs, Volume= 0.041 af, Atten= 5%, Lag= 1.3 min  
 Routed to Reach 4R : Proposed 10" Culvert

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Max. Velocity= 1.11 fps, Min. Travel Time= 2.0 min  
 Avg. Velocity = 0.28 fps, Avg. Travel Time= 8.1 min

Peak Storage= 93 cf @ 12.02 hrs  
 Average Depth at Peak Storage= 0.25' , Surface Width= 3.49'  
 Bank-Full Depth= 0.75' Flow Area= 3.2 sf, Capacity= 6.51 cfs

2.00' x 0.75' deep channel, n= 0.080 Earth, long dense weeds  
 Side Slope Z-value= 3.0 '/' Top Width= 6.50'  
 Length= 136.0' Slope= 0.0328 '/'  
 Inlet Invert= 317.00', Outlet Invert= 312.54'

### Summary for Reach 6R: 12" Culvert Pond Discharge

[52] Hint: Inlet/Outlet conditions not evaluated

Inflow Area = 1.574 ac, 29.03% Impervious, Inflow Depth > 2.14" for 10-yr event  
Inflow = 1.95 cfs @ 12.18 hrs, Volume= 0.280 af  
Outflow = 1.95 cfs @ 12.18 hrs, Volume= 0.280 af, Atten= 0%, Lag= 0.1 min  
Routed to Pond 2ST : Existing Sediment Trap

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
Max. Velocity= 4.52 fps, Min. Travel Time= 0.1 min  
Avg. Velocity = 1.04 fps, Avg. Travel Time= 0.4 min

Peak Storage= 10 cf @ 12.18 hrs  
Average Depth at Peak Storage= 0.54' , Surface Width= 1.00'  
Bank-Full Depth= 1.00' Flow Area= 0.8 sf, Capacity= 3.44 cfs

12.0" Round Pipe  
n= 0.012 Corrugated PP, smooth interior  
Length= 22.6' Slope= 0.0080 '/  
Inlet Invert= 309.83', Outlet Invert= 309.65'

**Summary for Pond 3P: Proposed Stormwater Pond**

[62] Hint: Exceeded Reach 3R OUTLET depth by 0.15' @ 12.25 hrs

Inflow Area = 1.574 ac, 29.03% Impervious, Inflow Depth = 2.14" for 10-yr event  
 Inflow = 4.93 cfs @ 12.01 hrs, Volume= 0.281 af  
 Outflow = 1.95 cfs @ 12.18 hrs, Volume= 0.280 af, Atten= 60%, Lag= 9.9 min  
 Primary = 1.95 cfs @ 12.18 hrs, Volume= 0.280 af  
 Routed to Reach 6R : 12" Culvert Pond Discharge  
 Secondary = 0.00 cfs @ 0.00 hrs, Volume= 0.000 af  
 Routed to Pond 2ST : Existing Sediment Trap

Routing by Dyn-Stor-Ind method, Time Span= 0.00-100.00 hrs, dt= 0.05 hrs / 2  
 Starting Elev= 309.83' Surf.Area= 1,843 sf Storage= 1,307 cf  
 Peak Elev= 311.47' @ 12.18 hrs Surf.Area= 7,909 sf Storage= 6,183 cf (4,876 cf above start)

Plug-Flow detention time= 621.4 min calculated for 0.250 af (89% of inflow)  
 Center-of-Mass det. time= 495.6 min ( 1,322.9 - 827.3 )
