Project: Moreau Truck Assessment, Town of Moreau, Saratoga County, New York
Re: Existing Conditions Assessment

This memo summarizes an assessment of trucks on Old West Road in the Town of Moreau related to trips to and from the *Hiram Hollow Transfer Station* located on Washburn Road in the Town of Wilton. This evaluation summarizes speed and volume data for general traffic and truck traffic on Old West Road and Washburn Road.

Existing Conditions

The *Hiram Hollow Transfer Station* located at 100 Washburn Road is operated by *Casella Waste Systems* and allows community residents, area businesses, and municipalities to drop off their permitted municipal solid waste, recycling, construction and demolition materials and yard waste; however, it does not accept hazardous or liquid waste. Trucks are then used to off-load the materials for final destinations which include landfills, recycling plants, and incinerators. The transfer station hours are 7:00 a.m. to 3:30 p.m. Monday through Friday and 7:00 a.m. to noon on Saturday.

Study Area Roadways

Washburn Road is classified as an urban local road that provides north-south travel from Wilton Gansevoort Road (CR 32) in the Town of Wilton to Old West Road in the Town of Moreau. Washburn Road is a two lane roadway with 10-foot wide travel lanes and one to two foot wide shoulders provided on both sides of the road. Sidewalks are not provided and the posted speed limit is 45-mph. Traffic volume data collected by CM (2020) shows that Washburn Road serves approximately 425 vehicles per day (vpd). Land uses along Washburn Road generally include residential homes, agricultural land, and the transfer station.

Washburn Road

Old West Road is also classified as an urban local road that provides east-west travel from US Route 9 to Fortsville Road (CR 31) in the Town of Moreau. Old West Road is a two lane roadway with 10-foot wide travel lanes and one to two foot wide shoulders provided on both sides of the road. Sidewalks are not provided and the posted speed limit is 45-mph. Traffic volume data collected by CM (2020) shows that Old West Road serves approximately 775 vpd west of Washburn Road. Land uses along Old West Road generally include residential homes and agricultural land.

Old West Road

Crash Analysis

A crash analysis was performed in accordance with NYS Highway Design Manual Chapter 5. Crash data was requested from NYSDOT to quantify the number of crashes and identify any crash patterns or concentrations on the segments of Washburn Road and Old West Road. Safety Information Management System (SIMS) and Accident Location Information System (ALIS) data was provided by NYSDOT on Washburn Road and Old West Road for a five-year period from September 1, 2014 through August 31, 2019. Table 1 summarizes the predominant crash types for the segments.

MEMORANDUM

Moreau Truck Assessment

August 21, 2020

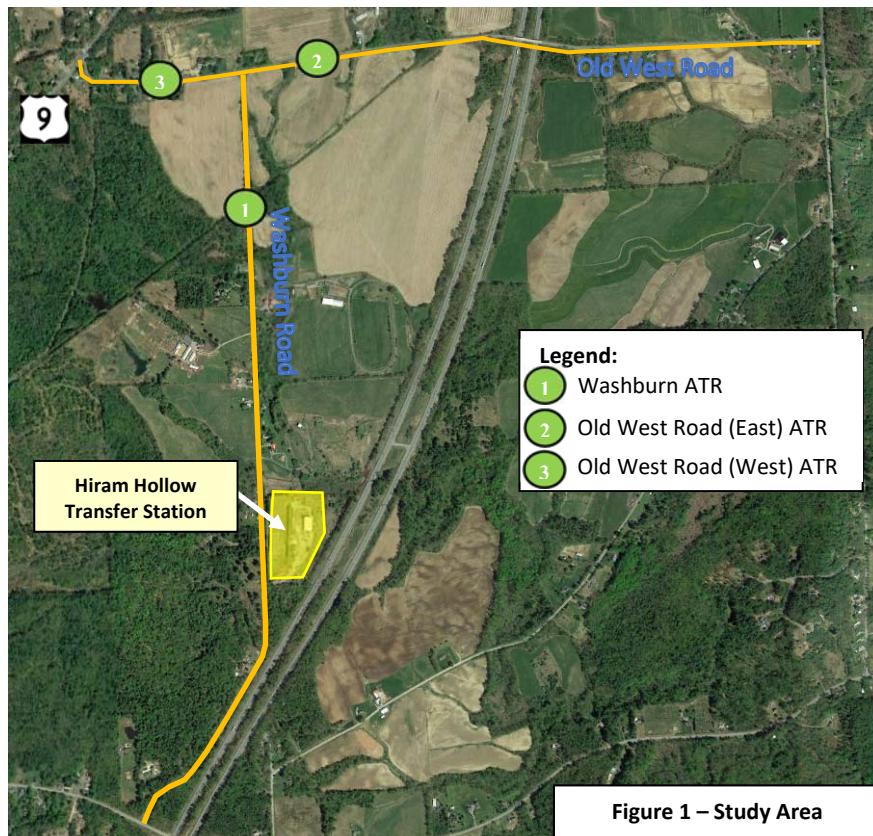

Table 1 – Crash Type and Severity

Segments	Collision Severity				Collision Type		Total
	Non-Reportable	Property Damage	Injury	Fatality	Deer	Fixed Object	
Washburn Road (Old West Road to Wilton Gansevoort Road)	0	2	0	0	2	0	2
Old West Road (US Route 9 to Fortsville Road)	1	1	1	0	1	2	3
Total	1	3	1	0	3	2	5

There were two crashes on Washburn Road and three crashes on Old West Road over the last five years of available data. Both crashes on Washburn Road were collisions with deer that involved property damage while one of the crashes on Old West Road involved a collision with a deer that resulted in a non-reportable crash. Non-reportable crashes are collisions that result in damage less than \$1,000. The remaining two crashes on Old West Road involved collisions with fixed objects (a tree and fire hydrant) that resulted in a property damage crash and an injury crash. These collisions occurred on the sharp curve located approximately 200-feet southeast of US Route 9 and were the result of unsafe speed and driver error due to alcohol involvement. A review of Old West Road indicates that a “Stop Ahead” sign is provided on the westbound approach and that chevron signs along the curve and curve warning signs with advisory 15-mph plaques are provided in both directions. None of the crashes on the segments of Washburn Road or Old West Road involved a truck. An accident summary (TE-213 equivalent) and collision diagram for these roadway segments is included under Attachment A.

Data Collection

The study area for this assessment includes two observation points on Old West Road and one observation point on Washburn Road shown on Figure 1.

MEMORANDUM

Moreau Truck Assessment

August 21, 2020

Daily traffic data was collected by three automatic traffic recorders (ATRs) for one week from Friday, July 24, 2020 through Friday, July 31, 2020. It is noted that existing daily traffic volume observations have been impacted due to phased business closings implemented by the State to combat the coronavirus. A comparison to available NYSDOT data collected on Old West Road west of Washburn Road indicates that the AADT (812 vehicles per day) in April 2010 is approximately five percent higher than the observed ADT (774 vehicles per day) in July 2020. This suggests that general daily traffic volumes observed at the three observation points should be increased (factored) in order to represent typical conditions; however, it is not anticipated that phased business closings have impacted heavy vehicle traffic conditions since these business sectors have continued to operate through the coronavirus pandemic. A truck classification summary is included under Attachment B.

Table 2 and Figure 2 summarize the hourly and daily general traffic and heavy vehicle traffic on the roadway segments while Table 3 summarizes the observed travel speeds in the area by classification and direction.

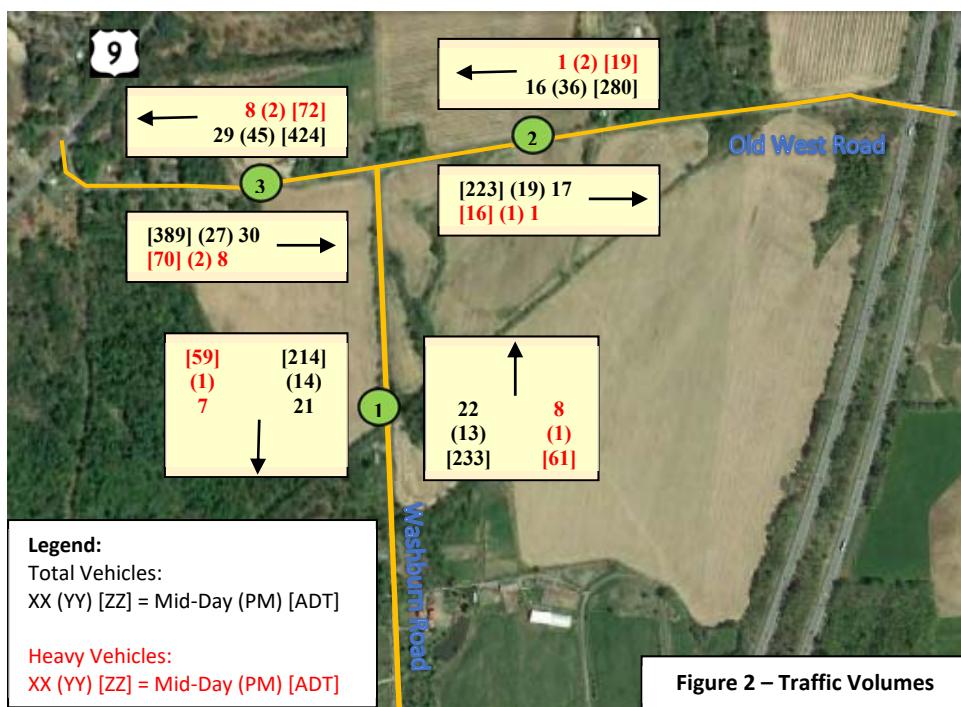

Table 2 – Traffic Volume Summary

Roadway Segment	Observed Traffic Volumes			Factored Traffic Volumes			Observed Heavy Vehicles			Heavy Vehicle Percent (Factored)		
	ADT	Mid-Day Peak	PM Peak	ADT	Mid-Day Peak	PM Peak	ADT	Mid-Day Peak	PM Peak	ADT	Mid-Day Peak	PM Peak
Washburn Road	426	41	26	447	43	27	120	15	2	27%	35%	7%
Old West Road (East)	479	31	52	503	33	55	35	2	3	7%	6%	5%
Old West Road (West)	774	56	69	813	59	72	142	16	4	17%	27%	6%

ADT = Average Daily Traffic

Mid-Day Peak = 1:00 to 2:00 p.m. (corresponds to peak transfer station operations)

PM Peak = 4:00 to 5:00 p.m. (corresponds to peak adjacent street traffic)

MEMORANDUM

Moreau Truck Assessment

August 21, 2020

Table 3 – Travel Speed Summary

Speed		Washburn Road		Old West Road (East)		Old West Road (West)	
		NB	SB	EB	WB	EB	WB
Posted Speed Limit		45-mph		45-mph		45-mph	
All Vehicles	Average Speed	45-mph	46-mph	47-mph	48-mph	41-mph	40-mph
	85 th Percentile Speed	51-mph	54-mph	54-mph	55-mph	48-mph	47-mph
Heavy Vehicles	Average Speed	46-mph	46-mph	48-mph	48-mph	39-mph	38-mph
	85 th Percentile Speed	51-mph	52-mph	54-mph	56-mph	44-mph	44-mph

Table 2 indicates that heavy vehicles represent approximately 27% of daily traffic on Washburn Road. During peak operating conditions of the transfer station, heavy vehicles represent approximately 35% of peak hour traffic on Washburn Road. In comparison, heavy vehicles represent approximately 7% to 17% of daily traffic on Old West Road east and west of Washburn Road, respectively. A review of mid-day peak hour conditions when the transfer station is fully operational indicates that heavy vehicles represent approximately 6% to 27% of peak hour traffic on Old West Road east and west of Washburn Road, respectively. This suggests that the majority of heavy vehicle traffic traveling to and from the transfer station on Old West Road and Washburn Road are coming to/from the west via US Route 9. In addition, Table 3 indicates that the average speed on Washburn Road and Old West Road (East) is consistent with the posted 45-mph speed limit and that the 85th percentile speed on these roadways is approximately 5 to 10-mph above the posted speed limit. By comparison, the average speed on Old West Road (West) is generally 5-mph below the posted 45-mph speed limit while the 85th percentile speed is consistent with the posted speed limit. The table also shows that truck speeds are comparable to overall vehicle speeds.

The hourly traffic data was averaged for all vehicles and for heavy vehicles (classification 4 through 13) and summarized on Tables 4 and 5 (attached). The mid-day and PM peak hours have been highlighted and heavy vehicles that occur during the transfer station hours of operations are shown in red. The raw ATR traffic volume and speed data for each count location on Washburn Road and Old West Road is included under Attachment C and includes the following:

- Hourly Traffic Volume Summary by Day (All Vehicle Types Combined)
- Hourly Traffic Volume Summary by Day (Heavy Vehicles Only)
- Daily Traffic Count Summary by Vehicle Type/Classification
- Daily Speed Summary (All Vehicle Types Combined and Heavy Vehicles Only)
- Daily Speed Summary Matrix (by Vehicle Type)

This memo summarizes existing traffic volumes, vehicle classifications, speeds, and crashes on Washburn Road and Old West Road. The data shows that although truck percentages range from 7% to 27% of the total traffic, truck traffic and the *Hiram Hollow Transfer Station* do not contribute to unusual traffic conditions (crashes or speeds) as compared to general traffic. Information published by the Washington State Transportation Center in *Classifications Vehicle Volume Distributions* indicates that national average heavy vehicle percentages for urban roads with a similar functional class as Old West Road and Washburn Road is approximately five percent. Please advise if any additional analysis is desired.
